Essential MG tells the full story of this well loved sports car from its early days, covering developments in style, increases in power, and its history in racing and speed trials. The first MG cars were produced in Oxford, England, in 1924. The car was instantly appealing, with a cheekiness of spirit that would characterize the marque all of its life, winning the hearts of millions around the globe, not least in the United States. The price was as attractive as the styling and the performance. It was cheap and it was fun, quintessential MG traits. Popular Mechanics inspires, instructs and influences readers to help them master the modern world. This handbook introduces a methodical approach and pragmatic concept for the planning and design of changeable factories that act in strategic alliances to supply the ever-changing needs of the global market. In the first part, the change drivers of manufacturing enterprises and the resulting new challenges are considered in detail with focus on an appropriate change potential. The second part concerns the design of the production facilities and systems on the factory levels work place, section, building and site under functional, organisational, architectural and strategic aspects keeping in mind the environmental, health and safety aspects including corporate social responsibility. The third part is dedicated to the planning and design method that is based on a synergetic interaction of process and space. The accompanying project management of the planning and construction phase and the facility management for the effective utilization of the built premises close the book. The Authors Prof. em. Inhaltsangabe:Abstract: Build Operate Transfer-Models roughly mean that a construction company operates a new built facility on his own or by a company, founded on its behalf, for a limited time. The orderer outsourced the production and pays for each manufactured unit (Pay-on-Production) instead of doing the whole investment for the new facility. At the transfer step the orderer either starts with operating the facility on his own, extends the contract with the facility deliverer (respectively with the extra-founded company), or looks for a new partner for operating the facility. In the middle 90 s first BOT projects had been realized in the automotive industry. Only few car manufactures went this way and with different motivations, but all of them expected advantages for their companies. This dissertation will analyze different motivations that led to the decision to ask facility deliverers for offering BOT-Models. An investigation of the automotive environment will be done and based on these results a statement will be derived under which circumstances BOT projects can fulfill the expectations of their customers and if sustainable competitive advantages can be generated with this approach. As BOT projects include outsourcing of own activities for a long period of time, long-term effects especially on industry attractiveness have to be considered, too. BOT projects are meant to generate a win-win situation between OEMs and facility deliverers. Hence it is necessary to understand advantages and disadvantages on both sides, which will be done in a study of this paper. As BOT projects can be realized for construction projects with different degrees of integration into production processes, resulting consequences are different, too. Therefore investigations of this dissertation will be limited to BOT projects with a high degree of integration; nevertheless examples of medium and low integrated facilities will be given as well. Zusammenfassung: Betreibermodelle sind eine spezielle Art der Projektgestaltung, die anfangs vorwiegend im öffentlichen Sektor Anwendung gefunden hat. Hier waren die Einbeziehung von privaten Partnern in öffentliche Projekte (Public Private Partnership) und leere öffentliche Kassen die treibenden Kräfte. Mitte der 90er Jahre wurden die

ersten Betreibermodelle in der Automobilindustrie realisiert, zum Beispiel bei VW do Brazil und MCC Smart / Hambach, um nur die Bekanntesten zu nennen. Diese Dissertation zeigt die [...] The desire for greater fuel efficiency and reduced emissions have accelerated a shift from traditional materials to design solutions that more closely match materials and their properties with key applications. The Multi-Material Lightweight Vehicle (MMLV) Project presents cutting edge engineering that meets future challenges in a concept vehicle with weight and life-cycle assessment savings. These results significantly contribute to achieving fuel reduction and to meeting future Corporate Average Fuel Economy (CAFÉ) regulations without compromising vehicle performance or occupant safety. The MMLV Project presents:

- Lightweight materials applications.
- Body in white design and computer aided engineering
- Engine and transmission design and lightweighting.
- Full vehicle test results that are specific to the MMLV subsystems including crash, corrosion, durability and Noise Vibration and Harshness (NVH).
- The Life Cycle Analysis (LCA) for the MMLV

The aluminum-intensive structure, combined with carbon fiber, magnesium, and titanium results in full vehicle mass reduction of a C/D class family sedan to that of a subcompact B-car (two vehicle segments lighter). The MMLV Project presents engineering solutions that frame materials selection and applications for the future. The engineering enterprise is a pillar of U.S. national and homeland security, economic vitality, and innovation. But many engineering tasks can now be performed anywhere in the world. The emergence of "offshoring"- the transfer of work from the United States to affiliated and unaffiliated entities abroad - has raised concerns about the impacts of globalization. The Offshoring of Engineering helps to answer many questions about the scope, composition, and motivation for offshoring and considers the implications for the future of U.S. engineering practice, labor markets, education, and research. This book examines trends and impacts from a broad perspective and in six specific industries - software, semiconductors, personal computer manufacturing, construction engineering and services, automobiles, and pharmaceuticals. The Offshoring of Engineering will be of great interest to engineers, engineering professors and deans, and policy makers, as well as people outside the engineering community who are concerned with sustaining and strengthening U.S. engineering capabilities in support of homeland security, economic vitality, and innovation.
