Computational Power Sep 17 2022 We delegate more and more decisions and tasks to artificial agents, machine-learning mechanisms, and algorithmic procedures or, in other words, to computational systems. Not that we are driven by powerful ambitions of colonizing the Moon, replacing humans with legions of androids, creating sci-fi scenarios à la Matrix or masterminding some sort of Person of Interest-like Machine. No, the current digital revolution based on computational power is chiefly an everyday revolution. It is therefore that much more profound, unnoticed and widespread, for it affects our customary habits and routines and alters the very texture of our day-to-day lives. This opens a precise line of inquiry, which constitutes the basic thesis of the present text: our computational power is exercised by trying to adapt not just the world but also our representation of reality to how computationally based ICTs work. The impact of this technology is such that it does not leave things as they are: it changes the nature of agents, habits, objects and institutions and hence it subverts the existing order, without necessarily generating a new one. I argue that this power is often not distributed in an egalitarian manner but, on the contrary, is likely to result in concentrations of wealth, in dominant positions or in unjust

competitive advantages. This opens up a struggle, with respect to which the task of reaffirming the fundamental values, the guiding principles, the priorities and the rules of the game, which can transform, or attempt to transform, a fierce confrontation between enemies in a fair competition between opponents rests on us.

Law and Technology in a Global Digital Society
Jan 17 2020 This book examines central aspects of the new technologies and the legal questions raised by them from both an international and an inter-disciplinary perspective. The technology revolution and the global networking of IT systems pose enormous challenges for the law. Current areas of discussion relate to autonomous systems, big data and issues surrounding legal tech. Ensuring data protection and IT security as well as the creation of a legal framework for the new technology as a whole can only be achieved through international and inter-disciplinary co-operation. The team of authors is made up of experienced, internationally renowned experts as well as young researchers and professionals who give valuable insights from numerous different jurisdictions. This book is written for jurists and those responsible for technology in public authorities and companies as well as practising lawyers and researchers.

New Skills for New Lawyers Feb 10 2022 The legal profession is facing a convergence of forces, most notably significant advances in the capabilities of technology, economic pressures

challenging existing business models and globalisation, that herald momentous change to the practice of law. In Australia the lead in seeking to understand these developments and formulate responses has been taken by the Law Society of New South Wales and its report on the Future of Law and Innovation in the Profession (FLIP). The Law Society conducted a commission of inquiry which culminated in the recognition of skills or areas of knowledge that were identified as essential for the successful future practice of law. In short, this involves two main inter-related streams of knowledge: first, the ability to understand and employ technology, and second a collection of skills that result in a "practice-ready" graduate, namely:

- Practice Skills (both interpersonal skills and professional skills)
- Business Skills
- Project Management
- Internationalisation and Cross-Border Practice of Law
- Inter-disciplinary experience
- Resilience

While technology is in many ways the 'headline act' there are also a range of other skills that are required because of the changes technology is facilitating and the need for lawyers to focus on what is central to their role or truly provides value to the client. This article discusses and elaborates on the findings of the FLIP inquiry in relation to legal education.

Law 3.0 Nov 07 2021 Putting technology front and centre in our thinking about law, this book introduces Law 3.0: the future of the legal landscape. Technology not only disrupts the

traditional idea of what it is 'to think like a lawyer,' as per Law 1.0; it presents major challenges to regulators who are reasoning in a Law 2.0 mode. As this book demonstrates, the latest developments in technology offer regulators the possibility of employing a technical fix rather than just relying on rules – thus, we are introducing Law 3.0. Law 3.0 represents, so to speak, the state we are in and the conversation that we now need to have, and this book identifies some of the key points for discussion in that conversation. Thinking like a lawyer might continue to be associated with Law 1.0, but from 2020 onward, Law 3.0 is the conversation that we all need to join. And, as this book argues, law and the evolution of legal reasoning cannot be adequately understood unless we grasp the significance of technology in shaping both legal doctrine and our regulatory thinking. This is a book for those studying, or about to study, law – as well as others with interests in the legal, political, and social impact of technology.

Knowledge, Technology and Law May 13 2022 The relationships between knowledge, technologies, and legal processes are central to the constitution of contemporary societies. As such, they have come to provide the focus for a range of academic projects, across interdisciplinary legal studies and the social sciences. The domains of medical law and ethics, intellectual property law, environmental law and criminal law

are just some of those within which the pervasive place and 'impact' of technoscience is immediately apparent. At the same time, social scientists investigating the making of technology and expertise - in particular, scholars working within the tradition of science and technology studies - frequently interrogate how regulation and legal processes, and the making of knowledge and technologies, are intermingled in complex ways that come to shape and define each other. This book charts the important interface between studies of law, science and society, as explored from the perspectives of socio-legal studies and the increasingly influential field of science and technology studies. It brings together scholars from both areas to interrogate the joint roles of law and science in the construction and stabilization of socio-technical networks, objects, and standards, as well as their place in the production of contemporary social realities and subjectivities.

Technology Jan 09 2022 Placing contemporary technological developments in their historical context, this book argues for the importance of law in their regulation. Technological developments are focused upon overcoming physical and human constraints. There are no normative constraints inherent in the quest for ongoing and future technological development. In contrast, law proffers an essential normative constraint. Just because we can do something, does not mean that we should. Through the application of

critical legal theory and jurisprudence to proactively engage with technology, this book demonstrates why legal thinking should be prioritised in emerging technological futures. This book articulates classic skills and values such as ethics and justice to ensure that future and ongoing legal engagements with socio-technological developments are tempered by legal normative constraints. Encouraging them to foreground questions of justice and critique when thinking about law and technology, the book addresses law students and teachers, lawyers and critical thinkers concerned with the proliferation of technology in our lives.

Information Technology Law Dec 20 2022
Information Technology Law takes a unique socio-legal approach to examining the interaction between the law and other elements of the information society. Murray discusses relevant issues such as governance, free expression, and crime with enthusiasm, and looks forward to future challenges presented by developing technologies.

Cloud Computing Law Dec 28 2020 Building on innovative research undertaken by the 'Cloud Legal Project' at Queen Mary, University of London, this work analyses the key legal and regulatory issues relevant to cloud computing under European and English law.

The Regulation of Social Media Influencers Mar 31 2021 In today's society, the power of someone's reputation, or influence, has been

turned into a job: that of being a social media influencer. This role comes with promises, such as aspirational work, but is rife with challenges, given the controversy that often surrounds influencers. This is the first book on the regulation of social media influencers, that brings together legal, economic and ethical angles to further unveil the implications of influencer marketing.

Digital Lawyering Mar 11 2022 In today's rapidly changing legal landscape, becoming a digital lawyer is vital to success within the legal profession. This textbook provides an accessible and thorough introduction to digital lawyering, present and future, and a toolkit for gaining the key attributes and skills required to utilise technology within legal practice effectively. Digital technologies have already begun a radical transformation of the legal profession and the justice system. Digital Lawyering introduces students to all key topics, from the role of blockchain to the use of digital evidence in courtrooms, supported by contemporary case studies and integrated, interactive activities. The book considers specific forms of technology, such as Big Data, analytics and artificial intelligence, but also broader issues including regulation, privacy and ethics. It encourages students to explore the impact of digital lawyering upon professional identity, and to consider the emerging skills and competencies employers now require. Using this textbook will

allow students to identify, discuss and reflect on emerging issues and trends within digital lawyering in a critical and informed manner, drawing on both its theoretical basis and accounts of its use in legal practice. Digital Lawyering is ideal for use as a main textbook on modules focused on technology and law, and as a supplementary textbook on modules covering lawyering and legal skills more generally.

Issues in Internet Law Aug 16 2022 The 8th edition of *Issues In Internet Law: Society, Technology, and the Law* has been updated for 2014 with the latest cases and trends in Internet Law. Topics include: Privacy (Invasion of Privacy; Public Records; Workplace Privacy; Employer & ISP Monitoring; Data Collection, Retention, and Breaches; Website Privacy Policies, Behavioral Marketing, Privacy & Children, Metadata); Free Speech (Defamation, SLAPPs, Gripe Sites, Blogs, Obscenity & Pornography, Harassment & Hate Speech, Prior Restraint, Student Speech, Anonymous Speech); Cybercrimes (Spam, Phishing, Identity Theft, Spyware & Malware, Cyberstalking, Cyberbullying, Computer Trespass, Virtual Crime); Intellectual Property (Copyright, Trademark, Patent, Trade Secrets, Creative Commons, File-Sharing, Fair Use, Public Domain, DMCA, Domain Name Disputes, Keyword Advertising); Business & the Internet (Internet Taxation, Interstate Commerce, Web Contracts, e-Discovery, Crowdfunding); Right of Publicity; Accessibility; Net Neutrality; Reputation Management; Social

Media Monitoring; Geofiltering; Digital Journalism; Digital Estate Planning; Sexting; Cloud Computing and more. The new edition has an expanded glossary, topic, statute, and case indexes. Concisely written and covering a broad range of topics, this is the most current book of its kind! Reviews: 'Concise overview of Internet-related legal issues.' (Law Library Journal) * 'Although it deals with the complex legal issues surrounding the Internet, it is written in layman's terms and illustrated with 'ripped from the headlines' court cases.' (Computing Reviews) * 'A valuable resource, well-researched and well presented.' * 'I want a copy on my bookshelf always within arm's reach.' * 'The anecdotal nature made it easy to understand the underlying legal concepts.' * 'With India's Internet users increasing, it is imperative that schools adopt this book in a way which would help young students gain knowledge about the various issues involving the Internet.' (Indian Journal of Intellectual Property Law) * 'Issues in Internet Law: Society, Technology, and the Law will be a welcome addition in both academic and public law libraries... It should be acquired by libraries for its concise overview of Internet-related legal issues.' (Law Library Journal)

Information Technology Law Sep 05 2021

Information technology affects all aspects of

modern life. From the information shared on social media such as Facebook, Twitter, and Instagram to online shopping and mobile devices, it is rare that a person is not touched by some form of IT every day. Information Technology Law examines the legal dimensions of these everyday interactions with technology and the impact on privacy and data protection, as well as their relationship to other areas of substantive law, including intellectual property and criminal proceedings. Focusing primarily on developments within the UK and EU, this book provides a broad-ranging introduction and analysis of the increasingly complex relationship between the law and IT. Information Technology Law is essential reading for students of IT law and also appropriate for business and management students, as well as IT and legal professionals. Online resources The accompanying online resources include a catalogue of web links to key readings and updates to the law since publication.

Augmented Reality Law, Privacy, and Ethics Feb 22 2023 Augmented Reality (AR) is the blending of digital information in a real-world environment. A common example can be seen during any televised football game, in which information about the game is digitally overlaid on the field as the players move and position themselves. Another application is Google Glass, which enables users to see AR graphics and information about their location and surroundings on the lenses of their "digital eyewear", changing in real-time as they

move about. **Augmented Reality Law, Privacy, and Ethics** is the first book to examine the social, legal, and ethical issues surrounding AR technology. Digital eyewear products have very recently thrust this rapidly-expanding field into the mainstream, but the technology is so much more than those devices. Industry analysts have dubbed AR the "eighth mass medium" of communications. Science fiction movies have shown us the promise of this technology for decades, and now our capabilities are finally catching up to that vision. Augmented Reality will influence society as fundamentally as the Internet itself has done, and such a powerful medium cannot help but radically affect the laws and norms that govern society. No author is as uniquely qualified to provide a big-picture forecast and guidebook for these developments as Brian Wassom. A practicing attorney, he has been writing on AR law since 2007 and has established himself as the world's foremost thought leader on the intersection of law, ethics, privacy, and AR. Augmented Reality professionals around the world follow his **Augmented Legality®** blog. This book collects and expands upon the best ideas expressed in that blog, and sets them in the context of a big-picture forecast of how AR is shaping all aspects of society. Augmented reality thought-leader Brian Wassom provides you with insight into how AR is changing our world socially, ethically, and legally. Includes current examples, case studies, and legal cases

from the frontiers of AR technology. Learn how AR is changing our world in the areas of civil rights, privacy, litigation, courtroom procedure, addition, pornography, criminal activity, patent, copyright, and free speech. An invaluable reference guide to the impacts of this cutting-edge technology for anyone who is developing apps for it, using it, or affected by it in daily life.

The Future of the Professions Oct 14 2019 This volume predicts the decline of today's professions and describes the people and systems that will replace them. In an Internet society, we will neither need nor want doctors, teachers, accountants, architects, the clergy, lawyers, and many others, to work as they did in the 20th century.

Judges, Technology and Artificial Intelligence Feb 27 2021 New and emerging technologies are reshaping justice systems and transforming the role of judges. The impacts vary according to how structural reforms take place and how courts adapt case management processes, online dispute resolution systems and justice apps. Significant shifts are also occurring with the development of more sophisticated forms of Artificial Intelligence that can support judicial work or even replace judges. These developments, together with shifts towards online court processes are explored in *Judges, Technology and Artificial Intelligence*.

Data Protection on the Move Dec 16 2019 This

volume brings together papers that offer methodologies, conceptual analyses, highlight issues, propose solutions, and discuss practices regarding privacy and data protection. It is one of the results of the eight annual International Conference on Computers, Privacy, and Data Protection, CPDP 2015, held in Brussels in January 2015. The book explores core concepts, rights and values in (upcoming) data protection regulation and their (in)adequacy in view of developments such as Big and Open Data, including the right to be forgotten, metadata, and anonymity. It discusses privacy promoting methods and tools such as a formal systems modeling methodology, privacy by design in various forms (robotics, anonymous payment), the opportunities and burdens of privacy self management, the differentiating role privacy can play in innovation. The book also discusses EU policies with respect to Big and Open Data and provides advice to policy makers regarding these topics. Also attention is being paid to regulation and its effects, for instance in case of the so-called 'EU-cookie law' and groundbreaking cases, such as Europe v. Facebook. This interdisciplinary book was written during what may turn out to be the final stages of the process of the fundamental revision of the current EU data protection law by the Data Protection Package proposed by the European Commission. It discusses open issues and daring and prospective approaches. It will serve as an

insightful resource for readers with an interest in privacy and data protection.

Privacy in Public Space Mar 19 2020 This book examines privacy in public space from both legal and regulatory perspectives. With on-going technological innovations such as mobile cameras, WiFi tracking, drones and augmented reality, aspects of citizens' lives are increasingly vulnerable to intrusion. The contributions describe contemporary challenges to achieving privacy and anonymity in physical public space, at a time when legal protection remains limited compared to 'private' space. To address this problem, the book clearly shows why privacy in public space needs defending. Different ways of conceptualizing and shaping such protection are explored, for example through 'privacy bubbles', obfuscation and surveillance transparency, as well as revising the assumptions underlying current privacy laws.

The Oxford Handbook of Criminal Law Apr 19 2020 The Oxford Handbook of Criminal Law reflects the continued transformation of criminal law into a global discipline, providing scholars with a comprehensive international resource, a common point of entry into cutting edge contemporary research and a snapshot of the state and scope of the field. To this end, the Handbook takes a broad approach to its subject matter, disciplinarily, geographically, and systematically. Its contributors include current

and future research leaders representing a variety of legal systems, methodologies, areas of expertise, and research agendas. The Handbook is divided into four parts: Approaches & Methods (I), Systems & Methods (II), Aspects & Issues (III), and Contexts & Comparisons (IV). Part I includes essays exploring various methodological approaches to criminal law (such as criminology, feminist studies, and history). Part II provides an overview of systems or models of criminal law, laying the foundation for further inquiry into specific conceptions of criminal law as well as for comparative analysis (such as Islamic, Marxist, and military law). Part III covers the three aspects of the penal process: the definition of norms and principles of liability (substantive criminal law), along with a less detailed treatment of the imposition of norms (criminal procedure) and the infliction of sanctions (prison or corrections law). Contributors consider the basic topics traditionally addressed in scholarship on the general and special parts of the substantive criminal law (such as jurisdiction, mens rea, justifications, and excuses). Part IV places criminal law in context, both domestically and transnationally, by exploring the contrasts between criminal law and other species of law and state power and by investigating criminal law's place in the projects of comparative law, transnational, and international law.

Online Courts and the Future of Justice Apr 12

2022 In this book Richard Susskind, a pioneer of rethinking law for the digital age confronts the challenges facing our legal system and the potential for technology to bring much needed change. Drawing on years of experience leading the discussion on conceiving and delivering online justice, Susskind here charts and develops the public debate.

Handbook Industry 4.0 Nov 26 2020 The handbook presents an overview of Industry 4.0 and offers solutions for important practical questions. The law and its current challenges regarding data assignment (who owns the data? / EU guidelines), data security, data protection (General Data Protection Regulation), cyberattacks, competition law (right to access vs. monopolists, permissible and prohibited exchanges of information, possible collaborations) is the point of departure. In turn, the book explores peculiarities in specific areas of Industry 4.0 (Internet of Production, mechanical engineering, artificial intelligence, electromobility, autonomous driving, traffic, medical science, construction, energy industry, etc.). The book's closing section addresses general developments in management, the digital transformation of companies and the world of work, and ethical questions.

Law, Technology and Society Jan 21 2023 This book considers the implications of the regulatory burden being borne increasingly by technological management rather than by rules of law. If crime is controlled, if human health and safety are

secured, if the environment is protected, not by rules but by measures of technological management—designed into products, processes, places and so on—what should we make of this transformation? In an era of smart regulatory technologies, how should we understand the ‘regulatory environment’, and the ‘complexion’ of its regulatory signals? How does technological management sit with the Rule of Law and with the traditional ideals of legality, legal coherence, and respect for liberty, human rights and human dignity? What is the future for the rules of criminal law, torts and contract law—are they likely to be rendered redundant? How are human informational interests to be specified and protected? Can traditional rules of law survive not only the emergent use of technological management but also a risk management mentality that pervades the collective engagement with new technologies? Even if technological management is effective, is it acceptable? Are we ready for rule by technology? Undertaking a radical examination of the disruptive effects of technology on the law and the legal mind-set, Roger Brownsword calls for a triple act of re-imagination: first, re-imagining legal rules as one element of a larger regulatory environment of which technological management is also a part; secondly, re-imagining the Rule of Law as a constraint on the arbitrary exercise of power (whether exercised through rules or through technological measures); and, thirdly, re-

imagining the future of traditional rules of criminal law, tort law, and contract law.

Artificial Intelligence and the Legal Profession

Aug 04 2021 How are new technologies changing the practice of law? With examples and explanations drawn from the UK, US, Canada, Australia and other common law countries, as well as from China and Europe, this book considers the opportunities and implications for lawyers as artificial intelligence systems become commonplace in legal service delivery. It examines what lawyers do in the practice of law and where AI will impact this work. It also explains the important continuing role of the lawyer in an AI world. This book is divided into three parts: Part A provides an accessible explanation of AI, including diagrams, and contrasts this with the role and work of lawyers. Part B focuses on six different aspects of legal work (litigation, transactional, dispute resolution, regulation and compliance, criminal law and legal advice and strategy) where AI is making a considerable impact and looks at how this is occurring. Part C discusses how lawyers and law firms can best utilise the promise of AI, while also acknowledging its limitations. It also discusses ethical and regulatory issues, including the lawyer's role in upholding the rule of law.

Internet Law Oct 26 2020 ; CLEAR & CONCISE:

Tight case editing, focused questions, and topical problems direct students' attention to the most critical issues. The book covers the

full sweep of the subject, but is still short enough that the core topics can be taught in a 3-credit survey course. **¿ UP-TO-DATE COVERAGE:** The seventh edition features five new principal cases, along with numerous new and revised notes and questions. New cases deal with international injunctions, free speech rights to use the Internet, compelled decryption, trademarks and search engines, and algorithmic accountability. Several sections have been tightened up and older material has been cut, resulting in a streamlined reading experience. **¿ TECHNICAL AND HISTORICAL NOTES:** Mini-essays throughout the book provide the essential technical background needed to make sense of computer and Internet technologies. Where modern doctrine has important historical roots (e.g., network neutrality and telecommunications regulation), the book gives the necessary context.

A Socio-Legal Study of Hacking May 01 2021 The relationship between hacking and the law has always been complex and conflict-ridden. This book examines the relations and interactions between hacking and the law with a view to understanding how hackers influence and are influenced by technology laws and policies. In our increasingly digital and connected world where hackers play a significant role in determining the structures, configurations and operations of the networked information society, this book delivers an interdisciplinary study of the practices, norms and values of hackers and

how they conflict and correspond with the aims and aspirations of hacking-related laws. Describing and analyzing the legal and normative impact of hacking, as well as proposing new approaches to its regulation and governance, this book makes an essential contribution to understanding the socio-technical changes, and consequent legal challenges, faced by our contemporary connected society.

Issues in Internet Law: Society, Technology, and the Law, 10th Ed. Jul 15 2022 The 10th edition of *Issues In Internet Law: Society, Technology, and the Law* has been updated for 2016 with the latest cases and trends in Internet Law. Future Law May 21 2020 How will law, regulation and ethics govern a future of fast-changing technologies? Bringing together cutting-edge authors from academia, legal practice and the technology industry, Future Law explores and leverages the power of human imagination in understanding, critiquing and improving the legal responses to technological change. It focuses on the practical difficulties of applying law, policy and ethical structures to emergent technologies both now and in the future. It covers crucial current issues such as big data ethics, ubiquitous surveillance and the Internet of Things, and disruptive technologies such as autonomous vehicles, DIY genetics and robot agents. By using examples from popular culture such as books, films, TV and Instagram - including 'Black Mirror', 'Disney Princesses', 'Star Wars', 'Doctor Who' and 'Rick and Morty' - it brings hypothetical examples to life. And it asks where law might go next and to regulate new-

phase technology such as artificial intelligence, 'smart homes' and automated emotion recognition.

Carl Schmitt and The Buribunks Jan 29 2021 In 1918 a young Carl Schmitt published a short satirical fiction entitled The Buribunks. He imagined a future society of beings who consistently wrote and disseminated their personal diaries. Schmitt would go on to become the infamous philosopher of the exception and for a while the 'Crown Jurist of the Third Reich'. The Buribunks – ironically for beings that lived only for self-memorialisation – has been mostly lost to history. However, the digital realm, with its emphasis on the informatic traces generated by human doing, and the continual interest in Schmitt's work to explain and criticise contemporary constellations of power, suggests that The Buribunks is a text whose epoch has come. This volume includes the first full translation into English of The Buribunks and a selection of critical essays on the text, its meanings in the digital present, its playing with and criticism of the literary form, and its place within Schmitt's life and work. The Buribunks and the essays provide a complex, critical and provocative invitation to reimagine the relations between the human and their imprint and legacy within archives and repositories. There is a fundamental exploration of what it means to be a being intensely aware of 'writing itself'. This is not just a volume for critical lawyers, literary scholars and the Schmitt literati. It is

a volume that challenges a broad range of disciplines, from philosophy to critical data studies, to reflect on the digital present and its assembled and curated beings. It is a volume that provides a set of fantastically located concepts, images and histories that traverse ideas and practices, play and politics, power and possibility.

How to Start a Law Firm Oct 06 2021 This friendly and accessible guide is one that you'll want to have on hand at every stage of the journey when starting your own law firm. From initial planning and choosing the right structure, overcoming teething problems, to expansion and beyond, in this book you'll find the practical guidance you need to set up and manage a law firm. Written by experienced practitioners who manage their own firms, How to Start a Law Firm includes guidance and advice on regulations, client care, staffing and managing finances, and new technology including AI. It offers lessons in how to develop the mindset of a business owner and a detailed study of how law firms have responded to the coronavirus pandemic.

Technology, Innovation and Access to Justice Feb 16 2020 While legal technology may bring efficiency and economy to business, where are the people in this process and what does it mean for their lives? Brings together leading judges, academics, practitioners, policy makers and educators from countries including India, Canada, Germany, United Kingdom South Africa and Nigeria

Includes contributions from Roger Smith, Dory Reiling, Christian Djeffal, George Williams and Odunoluwa Longe Offers a dialogue between theory and practice by presenting practical and reflective essays on the nature of changes in the legal sector Analyses technological changes taking place in the legal sector, situates where these developments have taken place, who has brought it about and what impact has it had on society Around four billion people globally are unable to address their everyday legal problems and do not have the security, opportunity or protection to redress their grievances and injustices. Courts and legal institutions can often be out of reach because of costs, distance, or a lack of knowledge of rights and entitlements and judicial institutions may be under-funded leading to poor judicial infrastructure, inadequate staff, and limited resources to meet the needs of those who require such services. This book sets out to embed access to justice into mainstream discussions on the future of law and to explore how this can be addressed in different parts of the legal industry. It examines what changes in technology mean for the end user, whether an ordinary citizen, a client or a student. It looks at the everyday practice of law through a sector wide analysis of law firms, universities, startups and civil society organizations. In doing so, the book provides a roadmap on how to address sector specific access to justice questions and to draw lessons for the

future. The book draws on experiences from judges, academics, practitioners, policy makers and educators and presents perspectives from both the Global South and the Global North.

The Philosophy of Law Meets the Philosophy of Technology Jul 03 2021 Law, Human Agency and Autonomic Computing interrogates the legal implications of the notion and experience of human agency implied by the emerging paradigm of autonomic computing, and the socio-technical infrastructures it supports. The development of autonomic computing and ambient intelligence – self-governing systems – challenge traditional philosophical conceptions of human self-constitution and agency, with significant consequences for the theory and practice of constitutional self-government. Ideas of identity, subjectivity, agency, personhood, intentionality, and embodiment are all central to the functioning of modern legal systems. But once artificial entities become more autonomic, and less dependent on deliberate human intervention, criteria like agency, intentionality and self-determination, become too fragile to serve as defining criteria for human subjectivity, personality or identity, and for characterizing the processes through which individual citizens become moral and legal subjects. Are autonomic – yet artificial – systems shrinking the distance between (acting) subjects and (acted upon) objects? How ‘distinctively human’ will agency be in a world of autonomic computing? Or,

alternatively, does autonomic computing merely disclose that we were never, in this sense, 'human' anyway? A dialogue between philosophers of technology and philosophers of law, this book addresses these questions, as it takes up the unprecedented opportunity that autonomic computing and ambient intelligence offer for a reassessment of the most basic concepts of law.

Technology Law Dec 08 2021 A thorough exploration of the new legal challenges created by evolving technologies, from facial recognition technology to cryptocurrencies.

Law, Technology and Dispute Resolution Jul 23 2020 The use of new information and communication technologies both inside the courts and in private online dispute resolution services is quickly changing everyday conflict management. However, the implications of the increasingly disruptive role of technology in dispute resolution remain largely undiscussed. In this book, assistant professor of law and digitalisation Riikka Koulu examines the multifaceted phenomenon of dispute resolution technology, focusing specifically on private enforcement, which modern technology enables on an unforeseen scale. The increase in private enforcement confounds legal structures and challenges the nation-state's monopoly on violence. And, in this respect, the author argues that the technology-driven privatisation of enforcement - from direct enforcement of e-commerce platforms to self-executing smart

contracts in the blockchain - brings the ethics of law's coercive nature out into the open. This development constitutes a new, and dangerous, grey area of conflict management, which calls for transparency and public debate on the ethical implications of dispute resolution technology.

The Routledge Handbook of Law and Society Sep 24 2020 This innovative handbook provides a comprehensive, and truly global, overview of the main approaches and themes within law and society scholarship or social-legal studies. A one-volume introduction to academic resources and ideas that are relevant for today's debates on issues from reproductive justice to climate justice, food security, water conflicts, artificial intelligence, and global financial transactions, this handbook is divided into two sections. The first, 'Perspectives and Approaches', accessibly explains a variety of frameworks through which the relationship between law and society is addressed and understood, with emphasis on contemporary perspectives that are relatively new to many socio-legal scholars. Following the book's overall interest in social justice, the entries in this section of the book show how conceptual tools originate in, and help to illuminate, real-world issues. The second and largest section of the book (42 short well-written pieces) presents reflections on topics or areas concerning law, justice, and society that are inherently interdisciplinary and that are relevance to current – but also classical – struggles around justice. Informing readers about the lineage of ideas that are used or could be

used today for research and activism, the book attends to the full range of local, national and transnational issues in law and society. The authors were carefully chosen to achieve a diverse and non-Eurocentric view of socio-legal studies. This volume will be invaluable for law students, those in inter-disciplinary programs such as law and society, justice studies and legal studies, and those with interests in law, but based in other social sciences. It will also appeal to general readers interested in questions of justice and rights, including activists and advocates around the world.

Smart Technologies and the End(s) of Law Jun 21 2020 This timely book tells the story of the smart technologies that reconstruct our world, by provoking their most salient functionality: the prediction and preemption of our day-to-day activities, preferences, health and credit risks, criminal intent and

Research from Archival Case Records Jun 02 2021 Legal history studies generally focus mainly on codified law, without attention to actual practice, and on the past, without relating it to the present. Research from Archival Case Records starts from legal practice instead and links the past to the present.

We, the Robots? Aug 24 2020 Explains how artificial intelligence is pushing the limits of the law and how we must respond.
