Based on the blockbuster movie starring Meryl Streep and Kevin Bacon. To help heal a marriage on the rocks, river-rafting expert Gail, her husband Tom, and their son embark on a white water adventure in Montana. Along the way, they encounter two inexperienced rafters supposedly looking for their friends downriver. Little do they know that the men are escaped convicts whose bid for freedom has a body count. Things take a turn when the young family learns that they are now the captives of two armed killers, and it becomes clear that there is much more at stake than a marriage. Desperate to evade both the police and federal marshals, the men force the family down the river and into the mouth of a deadly class 5 white-water rapid. Careening towards mortal peril, Gail and Tom must bond together to save their family from the brutality of nature and the savageness of man. This high-stakes thriller is both a testament to the power of mother nature and a classic adventure story that is perfect for fans of CJ Box and Craig Johnson. Denis O'Neill, the screenwriter for the movie The River Wild, brings the striking beauty of the film into his writing and ratchets up the danger that races forward to a breathtaking conclusion. In Swim Speed Secrets, 4-time Olympian, gold medalist, and triathlon world champion Sheila Taormina reveals the swim technique used by the world's fastest swimmers. Over the course of 4 Olympic Games and throughout her career as a world champion triathlete, Taormina refined her exceptional technique as a student of the sport, studying the world's best swimmers using underwater photographs and video analysis. From Johnny Weissmuller to Michael Phelps, the world's fastest swimmers share two common elements: high stroke rate and a high-elbow underwater pull. Many swimmers and triathletes neglect the underwater pull, distracted by stroke count or perfecting less critical details like body position, streamlining, and roll. Swim Speed Secrets focuses on producing power—the most crucial element of swimming—to help triathletes and swimmers overhaul their swim stroke and find the speed that's been eluding them. With a commonsense approach that comes from decades of practice and years of hands-on coaching experience, Taormina shows swimmers how to transition to faster swimming. Swim Speed Secrets includes: The best drills to cultivate a more sensitive feel for the water Dryland and strength building exercises to develop arm position and upper body musculature Crisp photos of Olympic swimmers and variations in their high-elbow underwater pull Clear descriptions of the key moments of the underwater pull Tips that helped her perform at a world-class level for two decades Sheila Taormina's Swim Speed Secrets brings the focus back where it belongs—to a powerful underwater stroke. With this approach, triathletes and swimmers can stop swimming for survival and break through to new levels of speed and confidence in the water. Featuring nine new articles chosen by coeditor Steven M. Cahn, the third edition of E. D. Klemke's The Meaning of Life offers twenty-two insightful selections that explore this fascinating topic. The essays are primarily by philosophers but also include materials from literary figures and religious thinkers. As in previous editions, the readings are organized around three themes. In Part I the articles defend the view that without faith in God, life has no meaning or purpose. In Part II the selections oppose this claim, defending instead a nontheistic, humanistic alternative—that life can have meaning even in the absence of theistic commitment. In Part III the contributors ask whether the question of the meaning of life is itself meaningful. The third edition adds substantial essays by Moritz Schlick, Joel Feinberg, and John Kekes as well as selections from the writings of Louis P. Pojman, Emil L. Fackenheim, Robert Nozick, Susan Wolf, and Steven M. Cahn. The only anthology of its kind, The Meaning of Life: A Reader, Third Edition, is ideal for courses in introduction to philosophy, human nature, and the meaning of life. It also offers general readers an accessible and stimulating introduction to the subject An ancient ocean roars under the red dirt. Hush. Be still for just a moment. Hear its thunder-ing waves crashing on unseen shores. Spanning four generations, with a focus on the 1960s and 70s, an era of rapid social change and burgeoning Aboriginal rights, Where the Fruit Falls is a re-imagining of the epic Australian novel. Brigid Devlin, a young Aboriginal woman, and her twin daughters navigate a troubled nation of First Peoples, settlers and refugees — all determined to shape a future on stolen land. Leaving the sanctuary of her family's apple orchard, Brigid sets off with no destination and a willy wagtail for company. As she moves through an everchanging landscape, Brigid unravels family secrets to recover what she'd lost — by facing the past, she finally accepts herself. Her twin daughters continue her journey with their own search for self-acceptance, truth and justice. 'In poetic and evocative storytelling, this writing celebrates the agency of Indigenous women to traverse ever-present landscapes of colonisation and intergenerational trauma. Country has an omniscient presence in their story lines, guiding the women across vivid desert and coastal landscapes. Where the Fruit Falls recognises both the open wounds of living histo-ries of colonisation and the healing power of belonging to Country.' — 2020 Dorothy Hewett Award judges 'This evocative family saga celebrates the strength and resilience of First Nation women, while touching on deeply traumatic aspects of Australian history. Threads of magic realism shimmer throughout the story, offering a deeper understanding of reality and challenging the reader to imagine a kinder, more just, more humane world.' — Sally Morgan A simple guide to creating spaces at home and work that align with your personality type and support

Hermann Joseph Muller (1890-1967) was a member of the early genetics group at Columbia University that developed the chromosome theory of inheritance. T. H. Morgan received the Nobel Prize in Medicine and Physiology for this work in 1934, and Muller, his student, received the Nobel Prize in 1946 for his discovery of radiation-induced mutation. Muller's writings extended beyond contributions to technical journals. He was an active critic of social abuse of science; he advocated eugenic programs based on free choice; and he played a major role in the reform of high school biology. Muller's social views were published in magazines and journals which are accessible to scholars more than to the lay reader or student. They have been collected here to show how extensively he thought our lives are affected by radiation, evolution, modern medicine, and gene theory. He attempted to alert humanity to the dangers of neglect and abuse of their genetic heritage. He also used humanistic values to urge mankind to improve itself, to foster cooperativeness, to increase health and intelligence, and to adopt an evolutionary outlook. A companion collection of essays, *The Modern Concept of Nature: Essays on Theoretical Biology* by H. J. Muller, also published by State University of New York Press, deals with Muller's scientific contributions to genetics and evolution. It was Muller who developed the relation between genes and mutation; his views on the primacy of the gene in biology are reflected today in the similar primacy of nucleic acids as the basis of life. For students of the history of ideas, a collection of these essays would illustrate how genetic thinking prepared the world view for molecular biologists. The relation of science to values is often neglected because of the inaccessibility of the written contributions of famous scientists. To read Muller's major essays in these two areas is an important way to evaluate a scientist's career, his maturation of ideas, and his developing application of science to society. Since the first edition was published in 1983, this highly-regarded introductory textbook has been used by many generations of students worldwide. It is specifically tailored to the requirements of first or second year geology undergraduates. The third edition has been extensively revised and updated to include many new sections and over 50 new or redrawn illustrations. There are now over 220 illustrations, many incorporating a second colour to highlight essential features. The format has been changed to enhance the visual attractiveness of the book. The tripartite organization of the first and second editions has been modified by combining the purely descriptive or factual aspects of fault and fold structure in the earlier chapters with a simple treatment of mechanisms, leaving the more geometrically complex treatment until after the relevant sections on stress and strain, as before. Some subjects are introduced for the first time, e.g. inversion and orogen collapse, and others have been extensively modified, e.g. the chapter on gravity controlled structures now emphasises modern work on salt tectonics. The last third of the book is devoted to the wider context of geological structures and how they relate to plate tectonics. The final two chapters have been considerably expanded and give examples of various types of geological structures in their plate tectonic settings in both modern and ancient orogenic belts.

What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In *A House To Remember*, she explains why.
