The Resonant Interface Mar 30

2021 In an age of ubiquitous computing it is essential that Interaction Design be based on the rich foundation of HCI research and knowledge. The Resonant Interface does that and more. It moves beyond the traditional scope of human-computer interaction (HCI) and is based on the concept of active learning that integrates theory and practice. Each chapter begins with a discussion of a particular HCI topic or concept that is then explored and put into perspective for interface design. The topics are then set in a design scenario using authentic interface problems and solutions. With a practical, engaging style, author Steve Heim moves beyond a focus on research findings and extends student learning into the processes of building usable interfaces for software and Web sites.

Technical Justice Sep 23 2020

Three technology areas profoundly affecting our lives are big data, genetic engineering, and artificial intelligence (AI). We throw off data like a dog shakes off water, resulting in increased security breaches and a loss of personal privacy. Tools like CRISPR are being used to genetically engineer human beings, usually with little societal oversight. AI is improving much faster than we can adapt, resulting in significant job losses through increased automation. Where do we go for redress? Will we be comfortable with a robotic judicial system? This is Volume 8 in the "Technology Today" series, the final collection of Scott Tilley's weekly newspaper columns from FLORIDA TODAY.

A National Strategy for the

Elimination of Hepatitis B

and C Aug 03 2021 Hepatitis B

and C cause most cases of

hepatitis in the United States

and the world. The two

diseases account for about a

million deaths a year and 78

percent of world's

hepatocellular carcinoma and

more than half of all fatal

cirrhosis. In 2013 viral

hepatitis, of which hepatitis B

virus (HBV) and hepatitis C

virus (HCV) are the most

common types, surpassed HIV

and AIDS to become the

seventh leading cause of death

worldwide. The world now has

the tools to prevent hepatitis B

and cure hepatitis C. Perfect

vaccination could eradicate

HBV, but it would take two

generations at least. In the

meantime, there is no cure for

the millions of people already

infected. Conversely, there is

no vaccine for HCV, but new direct-acting antivirals can cure 95 percent of chronic infections, though these drugs are unlikely to reach all chronically-infected people anytime soon. This report, the second of two, builds off the conclusions of the first report and outlines a strategy for hepatitis reduction over time and specific actions to achieve them.

Database Design Using Entity-Relationship Diagrams Jul 22 2020 Entity-relationship (E-R) diagrams are time-tested models for database development well-known for their usefulness in mapping out clear database designs. Also commonly known is how difficult it is to master them. With this comprehensive guide, database designers and developers can quickly learn all the ins and outs of E-R diagramming to become experts. An Introduction to Object-oriented Systems Analysis and Design with UML and the Unified Process Aug 23 2020 Overview: This text will be the first to present an object-oriented methodology from the outset for beginning Systems Analysis and Design students. It is the first book to introduce

object-oriented methods without relying on classical methods to introduce key concepts or without requiring students to know Java or C++. It will presume no knowledge whatsoever about process modeling or data modeling. The widely used UML notation (unified modeling language) will be used throughout the book for all diagrams and model renderings. The key benefit to this approach is that it makes the course easier to teach and learn since many students come to this course with limited backgrounds having only taken one introductory MIS course. Also, this approach is appealing because object-oriented methodology is widely used in industry.
