Each day a new law or regulation affects the way respiratory therapists perform their jobs. This basic legal guide contains the extensive information respiratory therapists need to know about the court system, lawyers, law,

and litigation. Written by the author, a lawyer and therapist with 13 years of clinical experience ranging from floor therapy to administrative and management functions, this book combines the author's knowledge of the complex interactions in the legal system and how the legal system relates to therapy delivered at the bedside. A resource for students and professionals, the book presents 16 areas of the law, including medical negligence, hospital law and employment law. The text also contains a series of questions and answers about the subject areas of the law, and provides extensive guidance for therapists navigating the treacherous currents of ever changing laws. This is a book for anyone who treats respiratory therapy patients or manages therapists. Most legal texts are written either by non-lawyers or non-therapists. Non-lawyers do not understand the complex interactions in the legal system, and are not permitted to give advice. Non-therapists may understand the law very well, but be unable to relate to how therapy is delivered at the bedside. This book is written by a therapist who is a lawyer, and who has been at the bedside. With thirteen years of clinical experience ranging from floor-therapy to administration and management functions, the author understands how a hospital works. The result is a book that is useful both as a course-book and as a reference. The only respiratory care text devoted exclusively to patient assessment! By performing a thorough patient assessment, you'll be able to assist physicians in the decision-making process regarding treatment, in evaluating the treatment's effectiveness, and in determining if changes in the treatment need to be made. The book's comprehensive approach covers all of the most important aspects and topics of assessment. This edition is streamlined to emphasize learning objectives. And you can prepare for the CRT exam more effectively with the new NBRC Exam Matrix Correlation Guide! A comprehensive approach covers all of the most important aspects of assessment, so you can assess patients effectively. Additional Questions to Ask About boxes list questions that you

should ask patients (e.g., coughing, sputum, shortness of breath) or ask yourself (e.g., lung sounds you are hearing, blood pressure, respiratory rate). Learning objectives, chapter outlines, chapter overviews, and key terms lists begin each chapter, preparing you for the key topics and content you will learn. Key Point summaries and assessment questions reflect and emphasize the key information identified in the learning objectives. Answers to assessment questions help you review by including rationales and page references to the textbook, by reflecting the NBRC format, and by supporting learning objectives. Enhanced Simply Stated boxes emphasize important concepts. Additional case studies help you apply chapter content to clinical scenarios. Content from the text is related to the NBRC exam matrix for the CRT exam on a companion Evolve website, helping you better prepare for the difficult board exams. A new Neurological Assessment chapter focuses on conscious sedation. A discussion of health literacy addresses the importance of determining the patient's level of understanding when conducting a patient assessment. Discussions of the assessment of the obese patient prepare you for some of the unique challenges related to assessing obese patients (e.g., the physical exam and chest x-ray). Key Point summaries in every chapter emphasize the learning objectives and provide an easy-to-find overview. A list of abbreviations common to assessment is included on the inside of the cover for quick reference. Procedure checklists for common assessment procedures are included in a new appendix, with PDFs of the forms available on the Evolve website.
