This study systematically points out where accounting problems will arise and how US GAAP and IFRS deal with these problems. It subsequently examines the differences in oil and gas accounting under US GAAP and IFRS in order to determine the impact on the financial statements. Current literature lacks a discussion of this subject in any detail. For the items discussed, the differences were found to be of low to medium impact to the financial accounts. This study examines the practice of implementation of the standards in order to form a hypothesis on the level of prudence in both sets of the accounting standards. Testing the hypothesis is done by way of a sample consisting of entities reporting under both US GAAP and IFRS. For a small sample of firms evidence was found that the set of accounting standards specific to oil and gas accounting does not significantly impact the statements in the sense of shareholders' equity and net income. Outcomes of this study can be used in determining whether the potential differences affecting shareholders' equity are bridgeable with respect to the intended IFRS implementation of the SEC in 2014.
