Escape from Java Jan 26 2021 The old light cruiser Marblehead was living out her final years of naval service as a member of the United States Asiatic Fleet in 1941. The small group of mostly antiquated ships based in the Philippines sailed the waters of East Asia to show the American flag in places like China, Hong Kong, Japan, and Singapore. The sudden eruption of World War II in the Pacific put the warship on the front lines of the conflict as Imperial Japan unleashed a series of devastating attacks across the region. On the morning of February 4, 1942, the warship was surprised by Japanese planes northeast of Java. Two large bombs slammed into Marblehead causing fires, casualties, and knocking out her steering gear. A third bomb exploded close by underwater. The near miss ripped a large gash into her hull allowing a torrent of water to rush inside the ship. Escape from Java takes the reader all throughout the ship as the story unfolds - next to gunners toiling to keep their guns firing, with medical staff tending to the wounded, and alongside damage control sailors working in flooded compartments. The damage was critical, so much so the Japanese radioed they had sunk the ship. In fact, through courage, sacrifice, and super-human effort, Marblehead would successfully make a harrowing 13,000 mile journey back to the US.

Happy Anniversary Clock's 400-Day Owners Repair Manual Apr 28 2021 The most comprehensive Anniversary Clock / 400-Day Repair Book. 2023 edition. Hundreds of photos and diagrams.

* Do you own a clock that is special to you that has stopped working, perhaps a gift or a family heirloom? This book is for you.

* Do you like to tinker with mechanical things? This book is for you.

* Have you taken a clock apart but can't get it back together? This book is for you.

* Are you fascinated with clocks, have several you have bought but do not work? This book is for you.

Many times, the problem is simple to correct. Be bold. Take on your project. This book will hold your hand every step of the way and guide you to success. YOU CAN DO IT.

Why does an Anniversary Clock stop Working? Most likely, it is because the suspension spring is broken. I will teach you how to replace it.

Often, the works are dirty, need oiling, or most likely both. When the clock stops, think of it as "the oil light is on." It's a "cry for help." Without oil, the metal parts grind on each other, causing severe wear and damage. Oil also attracts dust, making the oil "gummy" and adding drag to its operation until it can no longer overcome the friction. If a clock is oiled regularly [every three to five years], chances are you will only ever need to re-oil your clock. If the clock is allowed to run until it stops, the only sure way to service it is to remove the works from its case, dismantle the parts, clean, service, and put the movement back together with fresh oil and correct adjustment.

helicopters registered in Iran faces bankruptcy if their copters are claimed or destroyed by the uprising. The pilots need to escape, but they've built lives in Iran, some even have families. Finnish pilot Erikki Yokkonen has married Azadeh, an Iranian woman of noble birth, whose family is caught up in the political situation exploding around them. Tasked with saving as many of the helicopters as he can and desperate to save his love, Erikki and Azadeh become caught up in the events around them. Threaded throughout master storyteller James Clavell's novel Whirlwind much like a shimmering strand of silk woven through an elaborate Persian carpet, is the love story of two people from different backgrounds. They have been brought together by a love stronger than either one, a love stronger than the revolutionary fires that burn all around them. A moving story, expertly told, unthreaded from the original masterwork, and allowed to stand on its own, brilliantly.

Means of Escape from Fire Oct 03 2021 The provision of an adequate means of escape from fire is fundamental to the design of new buildings and to the alteration, change of use or extension of existing buildings. It is essential that means of escape are considered at the earliest stage of a project as mistakes are very expensive to correct later in the design. There is a great deal of legislation on means of escape design and control, but this is scattered throughout a large number of statutes, regulations and guidance documents. Many buildings need to be licensed and/or registered, as well as requiring certification and Building Regulation compliance. This book provides an invaluable reference on the subject for architects, surveyors and building control officers. It: ? identifies the legislation which applies to any particular building use ? describes the general principles of designing means of escape, together with a ten step approach for a range of residential and non-residential buildings ? considers alternative design options based on fire safety engineering ? outlines fire safety management in premises in use as an aid to employers, who have a statutory duty to undertake fire risk assessments.

Improving Self-Escape from Underground Coal Mines Aug 01 2021 Coal mine disasters in the United States are relatively rare events; many of the roughly 50,000 miners underground will never have to evacuate a mine in an emergency during their careers. However, for those that do, the consequences have the potential to be devastating. U.S. mine safety practices have received increased attention in recent years because of the highly publicized coal mine disasters in 2006 and 2010. Investigations have centered on understanding both how to prevent or mitigate emergencies and what capabilities are needed by miners to self-escape to a place of safety successfully. This report focuses on the latter - the preparations for self-escape. In the wake of 2006 disasters, the U.S. Congress passed the Mine Improvement and New Emergency Response Act of 2006 (MINER Act), which was designed to strengthen existing mine safety regulations and set forth new measures aimed at improving accident preparedness and emergency response in underground coal mines. Since that time, the efforts of the National Institute of Occupational Safety and Health (NIOSH) and the Mine Safety and Health Administration (MSHA) have contributed to safety improvements in the mining industry. However, the Upper Big Branch mine explosion in 2010 served as a reminder to remain ever vigilant on improving the prevention of mine disasters and preparations to help miners survive in the event of emergencies. This study was set in the context of human-systems integration (HSI), a systems approach that examines the interaction of people, tasks, and equipment and technology in the pursuit of a goal. It recognizes this interaction occurs within, and is influenced by, the broader environmental context. A key premise of human-systems integration is that much important information is lost when the various tasks within a system are considered individually or in isolation rather than in interaction with the whole system. Improving Self-Escape from Underground Coal Mines, the task of self-escape is part of the mine safety system.

The Great Desert Escape Jun 11 2022 Dramatic, highly readable, and painstakingly researched, The Great Desert Escape brings to light a little-known escape by 25 determined German sailors from an American prisoner-of-war camp. The disciplined Germans tunneled unnoticed through rock-hard, sunbaked soil and crossed the unforgiving Arizona desert. They were heading for Mexico, where there were sympathizers who could help them return to the Fatherland. It was the only large-scale domestic escape by foreign prisoners in US history. Wrung from contemporary newspaper articles, interviews, and first-person accounts from escapees and the law enforcement officers who pursued them, The Great Desert Escape brings history to life. At the US Army's prisoner-of-war camp at Papago Park just outside of Phoenix, life was, at the best of times, uneasy for the German Kriegsmariners. On the outside of their prison fences were Americans who wanted nothing more than to see them die slow deaths for their perceived roles in killing fathers and brothers in Europe. Many of these German prisoners had heard rumors of execution for those who escaped. On the inside were rabid Nazis determined to get home and continue the fight. At Papago Park in March 1944, a newly arrived prisoner who was believed to have divulged classified information to the Americans was murdered—hung in one of the barracks by seven of his fellow prisoners. The prisoners of war dug a tunnel 6 feet deep and 178 feet long, finishing in December 1944. Once free of the camp, the 25 Germans scattered. The cold and rainy weather caused several of the escapees to turn themselves in. One attempted to hitchhike his way into Phoenix, his accent betraying him. Others lived like coyotes among the rocks and caves overlooking Papago Park. All the while, the escapees were pursued by soldiers, federal agents, police

and Native American trackers determined to stop them from reaching Mexico and freedom.
