[Degradable Aliphatic Polyesters](#) Nov 25 2020 A renewed interest in aliphatic polyesters has resulted in developing materials important in the biomedical and ecological fields. Mainly materials such as PLA and PCL homopolymers have so far been used in most applications. There are many other monomers which can be used. Different molecular structures give a wider range of physical properties as well as the possibility of regulating the degradation rate. By using different types of initiators and catalysts, ring-opening polymerization of lactones and lactides provides macromolecules with advanced molecular architectures. In the future, new degradable polymers should be able to participate in the metabolism of nature. Some examples of novel polymers with inherent environmentally favorable properties such as renewability and degradability and a series of interesting monomers found in the metabolism cycles of nature are given.

[Basic Electronics](#) May 20 2020 Explains electronic devices and circuits with detailed illustrations. Includes end-of-chapter quizzes and problems.

[Handbook of Nonlocal Continuum Mechanics for Materials and Structures](#) Oct 05 2021 This handbook covers all areas of nonlocal continuum mechanics including theoretical

aspects, computational procedures, and experimental advances. The multidisciplinary scope of articles that comprise this reference are written by internationally recognized experts in the field and stand as the most-up-to-date, established knowledge base on using nonlocal continuum mechanics to characterize material behavior of advanced composites and nano-materials, as well as for engineering scale structures. The handbook is at once a comprehensive reference for academic researchers and engineers in industry concerned with nonlocal continuum mechanics for materials and structures as well as a supplement for graduate courses on a range of topics.

Carbon Nanotube-Polymer Composites 2020 The accessible compendium of polymers in carbon nanotubes (CNTs) Carbon nanotubes (CNTs)—extremely thin tubes a few nanometers in diameter but able to attain lengths thousands of times greater—are prime candidates for use in the development of polymer composite materials. Bringing together thousands of disparate research works, Carbon Nanotube-Polymer Composites: Manufacture, Properties, and Applications covers CNT-polymers from synthesis to potential applications, presenting the basic science and engineering of this dynamic and complex area in an accessible, readable way. Designed to be of use to polymer scientists, engineers, chemists, physicists, and materials scientists, the book covers carbon nanotube fundamentals, help polymer experts understand CNTs, and polymer physics.

to help those in the CNT field, making it an invaluable resource for anyone working with CNT-polymer composites. Detailed chapters describe the mechanical, rheological, electrical, and thermal properties of carbon nanotube-polymer composites. Including a glossary that defines key terms, Carbon Nanotube-Polymer Composites is essential reading for anyone looking to gain a fundamental understanding of CNTs and polymers, as well as potential and current applications, including electronics (shielding and transparent electrodes), flame retardants, and electromechanics (sensors and actuators), and their challenges.

Recent Trends in Life Sciences ~~Nov~~ 13 2019 The combination of multidisciplinary research in plants, animals, microorganisms and their interactions with molecular biology, genetic engineering approaches and advances in biology research has broadened the horizons of the life sciences. This book deals with recent trends in the life sciences and will be beneficial for postgraduate student researchers.

Natural Products ~~Mar~~ 30 2021 A fresh examination of the past successes of natural products as medicines and the new future from both conventional and new technologies. High-performance liquid chromatography profiling, combinatorial synthesis, genomics, proteomics, DNA shuffling, bioinformatics, and genetic manipulation all now make it possible to rapidly evaluate the activities of extr

as well as purified components derived from microbes, plants, and marine organisms. The authors apply these methods to new natural product drug discoveries, to microbial diversity, to specific groups of products (Chinese herbal drugs, antitumor drugs from microbes and plants, terpenoids, and arsenic compounds), and to specific sources (the sea, rainforest, and endophytes). These new opportunities show how research and development trends in the pharmaceutical industry can advance to include both synthetic compounds and natural products, and how this paradigm shift can be more productive and efficacious.

Natural Fiber Composites Nov 18 2022 Safely Design, Test and Construct Products Made of Natural Fiber Composites Natural fibers and their composites carry distinct advantages over industrial fibers. Some advantages—including renewability and availability of raw materials, and lower energy consumption—could help safeguard environmental resources and eventually replace synthetic composites and conventional materials. *Natural Fiber Composites* explores the growing use of natural fibers in composites and covers material properties, treatment and processing, modeling applications, design, and other vital information on this subject. Improve the Strength of Manufactured Composites and Determine the Best Processing Technique Incorporating independent pieces written by a team of international contributors, this book enables readers to analyze and design structural components using state-of-the-art informatic

methods. It provides an overview of natural fiber composite materials, details the superior specific mechanical properties of these materials, and presents development techniques and design case studies that can improve performance and enhance the manufacturing process. Natural Fiber Composites evaluates the value of natural fibers in composite materials, and offers introductory knowledge on natural fiber composites backed by internationally recognized experts in the field.

Surface Engineered Surgical Tools and Medical Devices
Jun 13 2022 This book examines the interaction between nano tools and nano materials. It explains the use of appropriate tools in surgery for a variety of applications and provides a complete description of clinical procedures accompanied by photographs. Coverage also presents the latest developments in surface coatings technology such as chemical vapor deposition for use on complex cutting tools for biomedical applications.

Aluminum-Lithium Alloy
Mar 10 2022 Because lithium is the least dense elemental metal, materials scientists and engineers have been working for decades to develop a commercially viable aluminum-lithium (Al-Li) alloy that

would be even lighter and stiffer than other aluminum alloys. The first two generations of Al-Li alloys tended to suffer from several problems, including poor ductility and fracture toughness; unreliable properties, fatigue and fracture resistance; and unreliable corrosion resistance. Now, new third generation Al-Li alloys with significantly reduced lithium content and other improvements are promising a revival for Al-Li applications in modern aircraft and aerospace vehicles. Over the last few years, these new Al-Li alloys have attracted increasing global interest for widespread applications in the aerospace industry largely because of soaring fuel costs and the development of a new generation of civil and military aircraft. This contributed to the book, featuring many of the top researchers in the field, the first up-to-date international reference for Al-Li materials research, alloy development, structural design and aerospace systems engineering. Provides a complete treatment of the new generation of low-density Al-Li alloys, including microstructure, mechanical behavior, processing and applications. Covers the history of earlier generation Al-Li alloys, their basic problems, why they were never widely used, and why the new third generation Al-Li alloys could eventually replace not only traditional aluminum alloys but also more expensive composite materials. Contains two full chapters devoted to applications in the aircraft and aerospace fields, where the lighter, stronger Al-Li alloys mean better performing, more fuel-efficient aircraft.

The Air Spora Feb 09 2022 This is an illustrated guide to trapping, identifying and quantifying airborne biological particles such as fungus, plant spores and pollen. Includes a comprehensive review of what is in the air and detailing the historical development of theories leading to modern aerobiology, the book explains the fundamental processes behind airborne dispersal and techniques used to sample identify and quantify biological particles. Includes photographs and 9 colour reproductions of paintings of airborne particles.

New Promising Electrochemical Systems for Rechargeable Batteries May 12 2022 The storage of electroenergy is an essential feature of modern energy technologies.

Unfortunately, no economical and technically feasible method for the solution of this severe problem is presently available. But electrochemistry is a favourite candidate from an engineering point of view. It promises the highest energy densities of all possible alternatives. If this is true, there should be a proportionality between the amount of electricity that can be stored and the possible voltage, together with the mass of materials which make this storage possible. Insofar it is a matter of material science to develop adequate systems. Electricity is by far the most important secondary energy source. The present production rate, mainly in the thermoelectric power stations, is in the order of 1.3 TW.

Rechargeable batteries (RB) are of widespread use in practice for electroenergy storage and supply. The total

capacity of primary and rechargeable batteries being exploited is the same as that of the world electric power stations. However, the important goal in the light of modern energy technology, namely the economical storage of large amounts of electricity for electric vehicles, electric route transport, load levelling, solar energy utilization, civil video & audio devices, earth and spatial communications, etc. cannot be met by the presently available systems. Unless so the new emerging electrochemical systems are established to date, RB's based on aqueous acidic or alkali accumulators are mainly produced today.

CCNA Voice 640-461 in 20 2023 Learn, prepare, and practice for exam success, master CCNA voice 640-461 topics, and assess your knowledge with chapter-opening quizzes. Review key concepts with exam preparation tasks and practice with realistic exam questions on the CD-ROM. Surveying Vol. Nov 06 2021 This Volume Is One Of The Two Which Offer A Comprehensive Course In Those Parts Of Theory And Practice Of Plane And Geodetic Surveying That Are Most Commonly Used By Civil Engineers. The First Volume Covers In 24 Chapters, The Most Common Surveying Operations. Each Topic Introduced Is Thoroughly Described, The Theory Is Rigorously Developed, And A Large Number Of Numerical Examples Are Included To Illustrate Its Application. General Statements Of Important Principles And Methods Are Almost Invariably Given By Practical Illustration. Apart From Illustrations Of Old And

Conventional Instruments, Emphasis Has Been Placed On New Or Modern Instruments, Both For Ordinary As Well Precise Work. A Good Deal Of Space Has Been Given To Instrumental Adjustments With Thorough Discussion Of Geometrical Principles In Each Case. Many New Advanced Problems Have Also Been Added Which Will Prove Useful For Competitive Examinations.

Design Of Steel Structures (By Limit State Method As Per IS: 800 2007) Aug 03 2021 So far working stress method used for the design of steel structures. Nowadays whole world is going for the limit state method which is more rational. Indian national code IS:800 for the design of steel structures was revised in the year 2007 incorporating limit state method. This book is aimed at training the student using IS: 800 2007 for designing steel structures by limit state method. The author has explained the provisions of code in simple language and illustrated the design procedure with a large number of problems. It is hoped that all universities will soon adopt design of steel structures as per IS: 2007 and this book will serve as a good textbook. A sincere effort has been made to present design procedure using simple language, neat sketches and solved problems.

AWS A5. 29/A5. 29M-2010, Specification for Low-Alloy Steel Electrodes for Flux Cored Arc Welding Oct 13 2019 This specification prescribes the requirements for classification of low-alloy steel electrodes for flux cored welding. The requirements include chemical composition

and mechanical properties of the weld metal and certain usability characteristics. Optional, supplemental designations are also included for improved toughness and diffusible hydrogen. Additional requirements are included for standard sizes, marking, manufacturing, and packaging. A guide is appended to the specification as a source of information concerning the classification system employed and the intended use of low-alloy steel flux cored electrodes.

Green Biocomposites Sep 04 2021 This book introduces the concept, design and application of green biocomposites, with a specific focus on the current demand for green biocomposites for automotive and aerospace components. It discusses the mathematical background, innovative approaches to physical modelling, analysis and design techniques. Including numerous illustrations, tables, case studies and exercises, the text summarises current research in the field. It is a valuable reference resource for researchers, students and scientists working in the field of materials science.

Extrusion-Cooking Techniques Aug 15 2022 Offering an engineering perspective and the latest information on the application of this rapidly expanding technique, this practical book covers the technology, engineering, materials and products, as well as economic and ecological aspects. In addition to the theory, it also utilizes case studies that can easily be put into industrial practice. Each step of the process is discussed in terms of sustainability, and all data compiled

with the EU and FTA environmental regulations. Invaluable reading for food chemists and technologists, process engineers, chemists in industry, agricultural scientists, and chemical engineers. From the Contents: * Engineering Aspects of Extrusion * Raw Materials in the Production of Extrudates * Production of Breakfast Cereals, Snack Pellets, Baby Food and more * Extrusion Technique in Confectionery * Pet Food and Aquafeed * Extrusion-Cooking in Waste Management and Paper Pulp Processing * Thermoplastic Starch * Expanders * Process Automation * Scale-Up of Extrusion-Cooking in Single-Screw Extruders

The Restoration of Borobudur Feb 21 2023 This publication traces the history and restoration of Chandi Borobudur, a Buddhist temple built over 1,000 years ago on the island of Java, Indonesia which was successfully restored during 1973-1983 and listed as a World Heritage Site in 1991. The book covers the various aspects of the process, including the arduous and painstaking task of logging the position of the stones, the studies that revealed the underlying sources of decay, and the important archaeological finds that provided clues to the temple's spiritual past; and includes many of the original drawings and photographs taken from the restoration project archives.

[The Leishmaniases in Biology and Medicine](#) Dec 15 2019

[Nanocellulose Materials](#) Jul 22 2020 Nanocellulose Materials: Fabrication and Industrial Applications focuses on the practices, distribution and applications of cellulose

the nanoscale. The book delivers recent advancements, highlights new perspectives and generic approaches on rational use of nanocellulose, and includes sustainability advantages over conventional sources towards green and sustainable industrial developments. The topics and sub-topics are framed to cover all key features of cellulose, extraction to technological evolution. Nanocellulose has great potential due to its versatility and numerous applications, including the potential role of nanocellulose scaffold derivatives towards active involvement in the e-sector, chemical sensing, catalysis, food industry and antibacterial coatings towards land, agricultural and aquatic systems. Explores the whole spectrum of industrial scale fabrications and the utilization of nanocellulose as a sustainable material or as part of a sustainability agenda. Discusses the environmental, legal, health and safety issues of nanocellulose. Assesses the major challenges and opportunities for using nanocellulose at an industrial scale.

The Professional Practice of Architectural Working Drawings Sep 16 2022 The practical, comprehensive handbook for creating effective architectural drawings. In one beautifully illustrated volume, The Professional Practice of Architectural Working Drawings, Fourth Edition presents the complete range of skills, concepts, principles, and

applications that are needed to create a full set of architectural working drawings. Chapters proceed logically through each stage of development, beginning with site floor plans and progressing to building sections, elevations and additional drawings. Inside, you'll find: Coverage of the latest BIM technologies Environmental and human design considerations Supplemental step-by-step instructions for complex chapters Five case studies, including two that are new to this edition Hundreds of computer-generated drawings and photographs, including BIM models, three-dimensional models, and full-size buildings shown in virtual space Checklists similar to those used in architectural offices Tips and strategies for complete development of construction documents, from schematic design to construction administration With an emphasis on sustainability throughout, this new edition of *The Professional Practice of Architectural Working Drawings* is an invaluable book for students in architecture, construction, engineering, interior design, and environmental design programs, as well as professionals in these fields.

Pragmatist Truth in the Post-Truth Age | May 18, 2020 It is commonly believed that populist politics and social media pose a serious threat to our concept of truth. Philosophers and pragmatists, who are typically thought to regard truth as merely that which is 'helpful' for us to believe, are sometimes blamed for providing the theoretical basis for the phenomenon of 'post-truth'. In this book, Sami Pihlström

develops a pragmatist account of truth and truth-seeking based on the ideas of William James, and defends a thoroughly pragmatist view of humanism which gives space for a sincere search for truth. By elaborating on James's pragmatism and the 'will to believe' strategy in the philosophy of religion, Pihlström argues for a Kantian-inspired transcendental articulation of pragmatism that recognizes irreducible normativity as a constitutive feature of our practices of pursuing the truth. James himself therefore emerges as a deeply Kantian thinker.

Micro-hydro Design Manual Aug 23 2020 Micro-Hydro Design Manual has grown from Intermediate Technology field experiences with micro-hydro installations and covers operation and maintenance, commissioning, electrical power, induction generators, electronic controllers, management, and energy surveys. There is an increasing need in many countries for power supplies to rural areas partly to support industries, and partly to provide illumination at night. Government authorities are faced with the very high costs of extending electricity grids. Often micro-hydro provides an economic alternative to the grid. This is because independent micro-hydro schemes save on the cost of grid transmission lines, and because grid extension schemes often have very expensive equipment and staff costs. In contrast, micro-hydro schemes can be designed and built by local staff and smaller organizations following less strict regulations and using 'off-the-shelf' components or local

made machinery.

Working Drawings Handbook Apr 30 2021 Working Drawings Handbook focuses on the principles, styles, methodologies, and approaches involved in drawings. The book first takes a look at the structure of information, the art of drawing, and draftsmanship. Discussions focus on dimensioning, drawing conventions, techniques, materials, drawing reproduction, location drawing, component and assembly drawings, assembly drawing, schedule, pictorial views, and structure of working drawings. The manuscript then ponders on working drawing management and other methods. Topics include planning the set, drawing registration, drawing office programming, and introducing new methods. Building elements and external features, conventions for doors and windows, symbols indicating materials, electrical telecommunications, and fire symbols, and non-active lines and symbols are also discussed. The book is a fine reference for draftsmen and researchers interested in studying the elements of drawing.

Leprosy Apr 18 2020 Leprosy (Hansen's disease) is an infectious disease caused by *Mycobacterium leprae*. It is one of the most disabling disorders in developing countries, with a peak incidence in the tropics and subtropics. With globalization, leprosy is now increasingly spreading to the western world. The impact of this infectious disorder is relevant for the human community due to its transmissible nature, and also important for the individual because of

debilitating consequences. Leprosy is a multifaceted systemic disease with variable presentation and clinical picture. Its identification may therefore not be straightforward, especially outside endemic areas. During its chronic course, leprosy is characterized by acute phases during which there may be exacerbation of symptoms and rapid progression to organ damage. When leprosy affects the eyes, nerves, and kidneys, it can represent a true medical emergency. The aim of this book is to make the reader familiar with the characteristic signs of disease, including abnormalities of the skin, nerves, eyes, hands, feet, testes, and bone. Early identification of disease is critical to prevent patient disability and establish appropriate therapy. Emphasis will be given to the current diagnostic tools to identify and quantify the organ damage, including electrophysiology, ultrasonography, magnetic resonance imaging, laboratory tests, and histopathology. Specific topics such as leprosy and pregnancy, leprosy and HIV infection, epidemiology, and leprosy control will also be covered.

Arctic and Alpine Mycology Apr 11 2022 During the summer of 1980, the First International symposium on Arctic and Alpine Mycology (ISAM-I) was held at the extant Naval Arctic Research Laboratory near Barrow, Alaska, U.S.A., well within the Arctic Circle (Laursen and Ammirati, Arctic and Alpine Mycology. The First International symposium on Arcto-Alpine Mycology. Univ. Wash. Press, 1982). The facility is currently owned and

operated by the Utkeagvik Inupiat community and is named the National Academic and Research Laboratory, thus retaining its acronym NARL. Twenty-five scientists participated in that historic first meeting. Their interests in the fungi spanned a vast geographic area of cold dominant habitats in both the northern and southern hemispheres and included four continents (N. and S. America, Eurasia, and Antarctica), nine countries, and numerous islands ranging from Greenland to Jan Mayen in the Svalbard group. ISAM-I helped to develop ongoing interests and initiate others, which is what ISAM-I founders hoped would happen. As a result, the organizing committee for ISAM-II was formed. Its mandate was to: involve a maximum of one third new participants in future ISAM meetings; divide the responsibility for organizing future meetings at sites located in areas of interest to research thrusts in Arctic and alpine environments; keep the number of participants small enough to ensure manageability, taking full advantage of field collecting opportunities with minimal complications and cost.

Self-Healing Polymer-Based Systems 14 2022 Self-Healing Polymer-Based Systems presents all aspects of self-healing polymeric materials, offering detailed information on fundamentals, preparation methods, technology, and applications, and drawing on the latest state-of-the-art research. The book begins by introducing self-healing polymeric systems, with a thorough explanation of

underlying concepts, challenges, mechanisms, kinetic and thermodynamics, and types of chemistry involved. The second part of the book studies the main categories of healing polymeric material, examining elastomer-based, thermoplastic-based, and thermoset-based materials in detail. This is followed by a series of chapters that examine the latest advances, including nanoparticles, coatings, shape memory, self-healing biomaterials, ionomers, supramolecular polymers, photoinduced and thermally induced self-healing, healing efficiency, life cycle analysis and characterization. Finally, novel applications are presented and explained. This book serves as an essential resource for academic researchers, scientists, and graduate students in the areas of polymer properties, self-healing materials, polymer science, polymer chemistry, and materials science. In industry, this book contains highly valuable information for R&D professionals, designers, and engineers, who are looking to incorporate self-healing properties in their materials, products, or components. Provides comprehensive coverage of self-healing polymeric materials, covering principles, techniques, and applications. Includes the very latest developments in the field, such as the role of nanofillers in healing, life cycle analysis of materials, and shape memory assisted healing. Enables the reader to unlock the potential of self-healing polymeric materials for a range of advanced applications.

Proceedings June 20 2020

The Science and Engineering of Materials Jan 08 2022 The Science and Engineering of Materials, Third Edition, continues the general theme of the earlier editions in providing an understanding of the relationship between structure, processing, and properties of materials. This text is intended for use by students of engineering rather than materials, at first degree level who have completed prerequisites in chemistry, physics, and mathematics. The author assumes these students will have had little or no exposure to engineering sciences such as statics, dynamics, and mechanics. The material presented here admittedly cannot and should not be covered in a one-semester course. By selecting the appropriate topics, however, the instructor can emphasise metals, provide a general overview of materials, concentrate on mechanical behaviour, or focus on physical properties. Additionally, the text provides the student with a useful reference for accompanying courses in manufacturing, design, or materials selection. In an introductory, survey text such as this, complex and comprehensive design problems cannot be realistically introduced because materials design and selection rely on many factors that come later in the student's curriculum. This text introduces the student to elements of design, however, more than 100 examples dealing with materials selection and design considerations are included in this edition.

Biofilm Infection Dec 07 2021 This book will cover both the evidence for biofilms in many chronic bacterial

infections as well as the problems facing these infections such as diagnostics and treatment regimes. A still increasing interest and emphasis on the sessile bacterial lifestyle biofilms has been seen since it was realized that that less than 0.1% of the total microbial biomass lives in the planktonic mode of growth. The term was coined in 1978 by Costerton et al. who defined the term biofilm for the first time. In 1993 the American Society for Microbiology (ASM) recognised that the biofilm mode of growth was relevant to microbiology. Lately many articles have been published on the clinical implications of bacterial biofilms. Both original articles and reviews concerning the biofilm problem are available.

[CCNA Voice Official Exam Certification Guide \(640-460 IIUC\)](#) Dec 19 2022 Master IIUC 640-460 exam topics with the official study guide Assess your knowledge with chapter opening quizzes Review key concepts with Exam Preparation Tasks CCNA Voice Official Exam Certification Guide is a best of breed Cisco exam study guide that focuses specifically on the objectives for the CCNA Voice IIUC 640-460 exam. Senior voice instructors and network engineers Jeremy Cioara, Michael Cavanaugh, and Kris Krake share preparation hints and test-taking tips, helping you identify areas of weakness and improve both your conceptual knowledge and hands-on skills. Material is presented in a concise manner, focusing on increasing your understanding and retention of exam topics. CCNA Voice Official Exam

Certification Guide presents you with an organized test preparation routine through the use of proven series elements and techniques. "Do I Know This Already?" quizzes open each chapter and allow you to decide how much time you need to spend on each section. Exam topic lists make referencing easy. Chapter-ending Exam Preparation Tasks sections help drill you on key concepts you must know thoroughly. Well-regarded for its level of detail, assessment features, and challenging review questions and exercises, this official study guide helps you master the concepts and techniques that will enable you to succeed on the exam the first time. CCNA Voice Official Exam Certification Guide is part of a recommended learning path from Cisco that includes simulation and hands-on training from authorized Cisco Learning Partners and self-study products from Cisco Press. To find out more about instructor-led training, e-learning, and hands-on instruction offered by authorized Cisco Learning Partners worldwide, please visit www.cisco.com/go/authorizedtraining. The official study guide helps you master all the topics on the IIUC exam, including Connecting IP phones to the LAN infrastructure Cisco Unified CME installation Cisco Unified CME IP phone configuration Cisco Unified CME voice productivity features Gateway and trunk concepts and configuration Cisco Unity Express concepts and configuration Smart Business Communications System Configuring and maintaining the UC500 for voice

The DJ Sales and Marketing Handbook Oct 17 2022 The DJ Sales and Marketing Handbook provides a roadmap to maximizing your profits as a disc jockey. It is jam-packed with practical tools, expert tips and cost-effective methods for increasing sales and creating loyal clients. Renowned DJ Stacy Zemon reveals specific ideas, proven techniques and creative approaches to multiplying your income and gaining the competitive edge. Written for both newcomers and experienced professionals, this comprehensive guide and essential reference manual gives you all of the know-how needed to achieve dramatic results. Inside you will find instructive examples and step-by-step guidelines for how to find a unique market niche; convert prospects into clients; create and implement a marketing plan; get free publicity; make strategic alliances; select the right media; generate leads and referrals; increase client satisfaction... and much much more. "Stacy Zemon is a knowledgeable source on being a pro mobile DJ. She is also a veteran of the industry who has contributed much to its evolution." - Jim Tremaine DJ Times Magazine "We endorse Stacy Zemon and her mission to provide DJs with educational resources that support their long-term goals, and help them to achieve prosperity." - American Disc Jockey Association

Numerical Models in Geomechanics Dec 01 2021 The papers in this volume reflect the current research and

advances made in the application of numerical methods geotechnical engineering. Topics include: instabilities in soil behaviour; environmental geomechanics; and hydro-mechanical coupling in problems of engineering.
