Introduction to Health Care Delivery: A Primer for Pharmacists, Sixth Edition provides students with a current and comprehensive overview of the U.S. health care delivery system from the perspective of the pharmacy profession. Each thoroughly updated chapter of this best-selling text includes real-world case studies, learning objectives, chapter review questions, questions for further discussion, and updated key topics and terms. Patient-Provider dialogues are also included to help students apply key concepts. Introduction to Health Care Delivery: A Primer for Pharmacists, Sixth Edition will provide students with an understanding of the social, organizational, and economic aspects of health care delivery. New approaches to tourism study demonstrate a notable ‘critical turn’ – a shift in thought that emphasises interpretative and critical modes of tourism inquiry. The chapters in this volume reflect this emerging critical school of tourism studies and represent a coordinated effort of tourism scholars whose work engages innovative research methodologies. Since such work has been dispersed across a variety of tourism-related and other research fields, this book responds to a pressing need to consolidate recent advances in a single text. Adopting a broad definition of ‘criticality’, the contributors seek to find ‘fresh’ ways of theorising tourism by locating

the phenomenon in its wider political, economic, cultural and social contexts. The collection addresses the power relations underpinning the production of academic knowledge; presents a range of qualitative data collection methods which confront the field's dominant (post)positivist approaches; foregrounds the emotional dynamics of research relations and explores the personal, the political and the situated nature of research journeys. The book has been divided into two parts, with the essays in the first part establishing a context-specific framework for engaging philosophical and theoretical debates in contemporary tourism enquiry. The second set of essays then present, discuss and critique specific methodologies, research techniques, methods of interpretation and writing strategies, all of which are in some sense illustrative of 'critical' tourism research. Contributors range from postgraduate students to established academics and are drawn from both the geopolitical margins and the 'powerbases' of the tourism academy. Their various relationships with the English-speaking academy thus range from relative 'outsider' to well-positioned 'insider' and as a result, their essays are reflective of a range of locations within the complexly spun web of academic power relations and social divisions. Critical Concepts in Management and Organization Studies provides an accessible introduction to the key themes of critical management studies. An ideal companion for students studying

critical management and organizations, it breaks down the complex language, concepts and philosophical underpinnings defining critical management studies. Exploring aspects of Irish medical history, from the nature and proposed remedies for various illnesses in eighteenth century Ireland, to the treatment of influenza in twentieth-century Ireland, this book shows how the cultures of medical care evolved over three centuries. The book provides a practical guide to the application of Critical Realism (CR), an increasingly popular philosophy of social science, in empirical research projects. Each purpose-written chapter reviews major social science research methods and contains extended illustration of how to conduct inquiry using CR.

High-k Materials in Multi-Gate FET Devices focuses on high-k materials for advanced FET devices. It discusses emerging challenges in the engineering and applications and considers issues with associated technologies. It covers the various way of utilizing high-k dielectrics in multi-gate FETs for enhancing their performance at the device as well as circuit level. Provides basic knowledge about FET devices Presents the motivation behind multi-gate FETs, including current and future trends in transistor technologies Discusses fabrication and characterization of high-k materials Contains a comprehensive analysis of the impact of high-k dielectrics utilized in the gate-oxide and the gate-sidewall spacers on the GIDL of emerging multi-gate FET architectures

Offers detailed application of high-k materials for advanced FET devices Considers future research directions This book is of value to researchers in materials science, electronics engineering, semiconductor device modeling, IT, and related disciplines studying nanodevices such as FinFET and Tunnel FET and device-circuit codesign issues. This volume provides an extensive overview of radiation effects on integrated circuits, offering major guidelines for coping with radiation effects on components. It contains a set of chapters based on the tutorials presented at the International School on Effects of Radiation on Embedded Systems for Space Applications (SERESSA) that was held in Manaus, Brazil, November 20-25, 2005. The goal of this NATO Advanced Research Workshop (ARW) entitled “Defects in Advanced High-k Dielectric Nano-electronic Semiconductor Devices”, which was held in St. Petersburg, Russia, from July 11 to 14, 2005, was to examine the very complex scientific issues that pertain to the use of advanced high dielectric constant (high-k) materials in next generation semiconductor devices. The special feature of this workshop was focus on an important issue of defects in this novel class of materials. One of the key obstacles to high-k integration into Si nano-technology are the electronic defects in high-k materials. It has been established that defects do exist in high-k dielectrics and they play an important role in device operation. However, very little is known about the nature of the defects

or about possible techniques to eliminate, or at least minimize them. Given the absence of a feasible alternative in the near future, well-focused scientific research and aggressive development programs on high-k gate dielectrics and related devices must continue for semiconductor electronics to remain a competitive income producing force in the global market. Multiple Sclerosis: A Mechanistic View provides a unique view of the pathophysiology of multiple sclerosis (MS) and related disorders. As the only book on the market to focus on the mechanisms of MS rather than focusing on the clinical features and treatment of the disease, it describes the role of genetic and environmental factors in the pathogenesis of MS, the role of specific cells in the pathophysiology of the disease, and the pathophysiology of inflammatory and neurodegenerative disorders related to MS. The book provides discussion of neurodegeneration and neuroregeneration, two critical emerging areas of research, as well as detailed discussion of the mechanisms of action of the approved and investigational drugs for treatment of MS and the emerging role of magnetic resonance spectroscopy (MRI) in investigations into MS. It is the only book on the market to offer comprehensive coverage of the known mechanisms of MS and related diseases, and contains contributions from physicians and researchers who are worldwide experts in the field of study. Focuses on the pathophysiologic mechanisms of multiple sclerosis

and the mechanisms of action in agents for the treatment of MS Discusses the roles of neurodegeneration and neuroregeneration in MS and related diseases Authored and edited by international leaders in the field of MS research On 8 February 2011, the Office of Fair Trading (OFT) referred the completed acquisition by Stena AB (Stena) of DFDS Seaways Irish Sea Ferries Limited and related assets from DFDS A/S (DFDS) to the Competition Commission (CC) for investigation and report by 25 July 2011. Stena AB (publ) is a private company registered in Sweden. Stena's Irish Sea operations include ownership of two ports in the UK (Holyhead and Stranraer). DFDS operates a sea-based freight and passenger transport network in Northern Europe. Until 2011, it ran four routes on the Irish Sea: from Heysham to Belfast or Dublin, and from Liverpool to Belfast or Dublin. As a result of the acquisition, Stena took over two of the routes that DFDS had been operating: Liverpool-Belfast, and Heysham-Belfast. Following the acquisition, DFDS closed the two other routes that it had been operating (Liverpool-Dublin and Heysham-Dublin). The Commission found that the acquisition did not lead to a substantial lessening of competition for freight services or in the provision of services to passengers. What would it mean to “get over slavery”? Is such a thing possible? Is it even desirable? Should we perceive the psychic hold of slavery as a set of mental manacles that hold us back from imagining a postracist America? Or

could the psychic hold of slavery be understood as a tool, helping us get a grip on the systemic racial inequalities and restricted liberties that persist in the present day? Featuring original essays from an array of established and emerging scholars in the interdisciplinary field of African American studies, *The Psychic Hold of Slavery* offers a nuanced dialogue upon these questions. With a painful awareness that our understanding of the past informs our understanding of the present—and vice versa—the contributors place slavery’s historical legacies in conversation with twenty-first-century manifestations of antiblack violence, dehumanization, and social death. Through an exploration of film, drama, fiction, performance art, graphic novels, and philosophical discourse, this volume considers how artists grapple with questions of representation, as they ask whether slavery can ever be accurately depicted, trace the scars that slavery has left on a traumatized body politic, or debate how to best convey that black lives matter. *The Psychic Hold of Slavery* thus raises provocative questions about how we behold the historically distinct event of African diasporic enslavement and how we might hold off the transhistorical force of antiblack domination. This book constitutes the refereed proceedings of the 11th International Conference on Engineering Psychology and Cognitive Ergonomics, EPCE 2014, held as part of the 16th International Conference on Human-Computer Interaction, HCII 2014, held in

Heraklion, Greece, in June 2014, jointly with 13 other thematically similar conferences. The total of 1476 papers and 220 posters presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 54 contributions included in the EPCE proceedings were carefully reviewed and selected for inclusion in this volume and are organized in the following topical sections: mental workload and stress; visual perception; cognitive issues in interaction and user experience; cognitive psychology in aviation and space; transport and industrial applications. This text presents a comprehensive and up-to-date reference work on popular music, from the early 20th century to the present day. This title examines how contemporary currents in sociology and social theory have influenced the field of organisation studies. It aims to combat the tendency towards myopia in the organisation studies field, which encourages reliance on resources and references drawn from within the field and discourages scholars from going beyond these boundaries to find inspiration and ideas. The contributing authors show how sociologists and sociological

concepts from the US and Europe have provided new insights into the functioning of organisations. Critical Management Studies (CMS) has emerged as a movement that questions the authority and relevance of mainstream thinking and practice. Critical of established social practices and institutional arrangements, it challenges prevailing systems of domination and promotes the development of alternatives to them. CMS draws upon diverse critical traditions. Of particular importance for its initial articulation was the thinking of members of the Frankfurt School of Critical Theory. From these foundations, CMS has grown into a pluralistic and inclusive movement incorporating a diverse range of perspectives - ranging from labour process theory to radical feminism. In recent times, a set of ideas broadly labelled 'poststructuralist' have been developed to complement and challenge the insights of Critical Theory, giving new impetus for scholars seeking to challenge the status quo and articulate a more inclusive and humane future for management practice. The Oxford Handbook of Critical Management Studies provides an overview of theoretical approaches, key topics, issues, and subject specialisms in management studies, as well as a set of reflections on the progress and prospects of CMS. Contributors are all specialists in the respective fields and share a concern to interrogate and challenge received wisdom about management theory and practice. Given the rapid growth of the CMS movement,

its ever increasing theoretical and geographical diversity and its outreach into the public sphere, The Oxford Handbook of Critical Management Studies is a timely publication. In addition to UK contributors, where CMS has developed most rapidly, there is strong representation from North American contributors as well as from areas where CMS has taken hold more recently, such as Australasia. Labour process theory is consolidated in Working Life to develop a credible account of the relationships between capitalist political economy, work systems and the strategies and practices of actors in the employment relationship. Beyond this, the book explores the future of labour process analysis. Drawing extensively on the research findings of natural and social sciences both in America and Europe, Reframing the Social argues for a critical realist and systemist social ontology, designed to shed light on current debates in social theory concerning the relationship of social ontology to practical social research, and the nature of 'the social'. It explores the works of the systems theorist Mario Bunge in comparison with the approach of Niklas Luhmann and critical social systems theorists, to challenge the commonly held view that the systems-based approach is holistic in nature and necessarily downplays the role of human agency. Theoretically sophisticated and investigating the work of a theorist whose work has until now received insufficient attention in Anglo-American thought, this book will be of interest

to those working in the field of social theory, as well as scholars concerned with philosophy of social science, the project of analytical sociology, and the nature of the relationship between the natural and social sciences. This book explores how ideas about age changed for novels and their readers during the eighteenth and nineteenth centuries.
