Chronicles the advent of so-called western or scientific medicine in the modern era, and how Navajos adapted, but did not compromise their traditional healings ways. Adulthood in the Navajo world is marked by the onset of menstruation in females and by the deepening of the voice in males. Accordingly, young adults must accept responsibility over the powers manifest in blood and voice: for women, the forces that control reproduction and growth; for men, the powers of protection and restoration of order that come through maintaining Navajo oral tradition. The maintenance of the latter tradition has long been held to be the function of the Navajo singer, a role usually viewed as male. But despite this longstanding assumption, women can and do fill this role. Drawing on interviews with seventeen Navajo women practitioners and five apprentices, Maureen Trudelle Schwarz explicates women's role as ceremonial practitioners and shows that it is more complex than has previously been thought. She examines gender differences dictated by the Navajo origin story, details how women came to be practitioners, and reveals their experiences and the strategies they use to negotiate being both woman and singer. Women who choose careers as singers face complex challenges, since some rules prohibit menstruating women from conducting ceremonies and others regarding sexual continence can strain marital relationships. Additionally, oral history places men in charge of all ceremonial matters. Schwarz focuses on how the reproductive life courses of Navajo women influence their apprenticeships and practices to demonstrate how they navigate these issues to preserve time-honored traditions. Through the words of actual practitioners, she shows how each woman brings her own unique life experience to the role. While differing among individuals, these experiences represent a commitment to shared cultural symbols and result in a consensus that sustains social cohesion. By showing the differences and similarities between the apprenticeship, initiation, and practice of men and women singers, Blood and Voice offers a better understanding of the role of Navajo women in a profession usually viewed as a male activity—and of the symbolic construction of the self in Navajo culture. It also addresses classic questions concerning the sexual division of labor, menstrual taboos, gender stereotypes, and the tension between tradition and change that will enlighten students of other cultures. Over 9,000 entries; A detailed section on Navajo pronunciation; A comprehensive, modern vocabulary; Useful, everyday expressions. This major research study provides a fresh, critical look at the way automobile electronics are and should be built. Written by Silicon Valley pioneer John Hall, this book is based on his nearly 40 years of experience in developing and producing semiconductors for the automobile industry and other customers. Highly readable and comprehensible for even beginning students of electronics and semiconductor design, this volume provides an in-depth explanation of the factors to be considered when building vehicle systems. Starting with a concise history of vehicle electronics, Hall walks the reader through the environmental conditions faced by these systems and the variety of failure mechanisms that can occur. Basic and advanced semiconductor issues raised by vehicle implementation are then discussed in detail. A wide range of issues confronting designers—from over-marketing of risky features to time and cost constraints—are explained. Complex electronic modules from many different manufacturers are examined and discussed as real-world case studies of good and bad design techniques. Hall concludes by providing design recommendations that will allow vehicle electronics system developers to build much tougher devices at little or no incremental production cost. This book is the first major work to focus on key issues emerging as major causes of safety and performance problems. Vehicle makers increasingly seek market advantages by providing ever-more-capable electronics in their products. While these features add much value to vehicles, they fail in ways that are beyond the experience and comprehension of most technicians and accident investigators. By combining decades of design experience and innovation with extensive research, Hall has produced unique insights and explanations so engineers can prevent most, or perhaps all, of these problems. John Hall is one of Silicon Valley's most prolific independent pioneers and inventors. He founded Union Carbide's semi conductor operation in 1962. He is a founder of Interstil and Micro Power Systems. He is the inventor of the first electronic watch, first LCD digital watch; first CMOS liquid crystal display hand held calculator, color autofocus cameras among many successful commercial products. He has worked for many American and foreign automakers on specific projects such as integrated two way radios and seat belt interlocks. He is working with DoD on hardening

electronics systems against non nuclear events. CONTRIBUTIONS TO THE SOCIOLOGY OF LANGUAGE brings to students, researchers and practitioners in all of the social and language-related sciences carefully selected book-length publications dealing with sociolinguistic theory, methods, findings and applications. It approaches the study of language in society in its broadest sense, as a truly international and interdisciplinary field in which various approaches, theoretical and empirical, supplement and complement each other. The series invites the attention of linguists, language teachers of all interests, sociologists, political scientists, anthropologists, historians etc. to the development of the sociology of language. Documents the effects of adopting standards for public land health and guidelines for livestock grazing management on Bureau of Land Management (BLM) administered land in New Mexico. The standards and guidelines would be incorporated into eight BLM resources management plans (RMP) that cover approximately 13.5 million acres. In addition, for each alternative there are existing land use decisions that are in conformance with the standards. These decisions would be changed to bring them into conformance"--Page xiii. In the first few months of the war in the Pacific during World War II, the Japanese broke all of the Allies' codes and always knew where the Americans would attack next. Japanese code breaking cost thousands of American lives until a missionary's son came up with an unusual solution and the United States Marine Corps recruited some unexpected allies. Navajo recruits (later nicknamed the "Code Talkers") developed a fast, efficient, unbreakable code using their unique native language coupled with word and letter substitutions. The Japanese never broke the code. This book is an introduction to the code, the creation of the code, and the men who developed and used it. The Navajo Code Talkers helped win the war in the Pacific using the very language that the government attempted to beat out of them as children in Indian schools.
