This volume is a collection of immunohematology and transfusion medicine cases, comprised of clinical vignettes and antibody panels with questions based on each case, arranged in a workbook format. The cases are based on real patient problems which are typically encountered and covers a number of common issues and challenging problems in blood banking and transfusion practice. Discussion and resolution of each case is provided in a separate answer section, including up-to-date information on pertinent advances in the field. Written by experts in the field, *Immunohematology and Transfusion Medicine: A Case Study Approach* provides an interactive tool to help make blood banking and transfusion medicine memorable, practical, and relevant to residents and fellows. *Clinical Laboratory Blood Banking and Transfusion Medicine: Principles and Practices* provides readers with the didactic foundation, background, and tools to successfully function in a typical transfusion medicine laboratory. Consolidates today's available information on this timely topic into a single, convenient resource. Transfusion Medicine, Apheresis, and Hemostasis: Review Questions and Case Studies is the collaborative effort that spanned a time period of 2 years and included 50 experts, many whom are national leaders in their respected fields. It also represents the passion and privilege we feel to teach the next generation of physicians in Transfusion Medicine and Apheresis. The main goal for this book is to help the readers build a solid foundation of both basic and advanced conceptual knowledge to prepare for the American Board of Pathology (ABP) certification exam in Transfusion Medicine. This book is not intended to be a substitute for textbooks, original research or review articles, and/or clinical training. Further, since the

field of medicine, both from a scientific and regulatory perspective, rapidly changes, the readers are advised to continuously update their knowledge by attending national meetings and reading clinical journals. To equip the readers with the basic knowledge in critical reading and data analysis, which is an essential skill in daily medical practice, a novel chapter titled “Data Interpretation in Laboratory Medicine” was included in this book. In this chapter, the readers are asked to make logical conclusions based on the given data and/or statistical results. Moreover, there is also a chapter on “Practical Calculations in Transfusion Medicine, Apheresis, and Hemostasis” to help consolidate all the necessary formulas commonly used in daily practice for easy reference. These chapters are unique to our book and will not be found in any other currently on the market. All of the questions in this book were originally created by the authors of each chapter. Each question can either be standalone or part of a case scenario representing challenge cases in Transfusion Medicine, Apheresis, and Hemostasis. These questions often represent both rare and common clinical scenarios that the authors have seen during their clinical practice. Each question is then followed by 5 possible answers, with only one being correct (or the best answer). After the question, there is a conceptual explanation followed by a more factual explanation of the right and wrong answers. We gave the individual authors the freedom to choose how they explained the wrong answer choices. Some authors chose to be more direct (e.g. Answer A is incorrect because...), while other authors chose a more conversational style (e.g. Human resources (answer A) includes staffing, selection, orientation, training, and competency assessment of employees). This format is designed to help the student linking the conceptual and factual knowledge together to form a solid foundation for use in clinical practice. At the end of each chapter, there is a list of articles and textbooks that will prove useful to the motivated student who wishes to become an expert in the field. Another special feature to our textbook is the presence of a pre-test and post-test, which are provided to help the readers with self-assessment. As stated above, the main focus of this book is to help the readers preparing for the ABP certification exam in Transfusion Medicine. However, due to the interdisciplinary nature of the field of Transfusion Medicine, Apheresis, and Hemostasis, we believe that this book is also beneficial to and can be used by all clinicians involved in the management of complex transfusion, apheresis, and hemostasis issues, such as hematologists, anesthesiologists, surgeons, and critical care physicians. We further believe that it is a helpful guide for these specialists to prepare for their own specialty certification exam, when the topics are related to Transfusion Medicine, Apheresis, and Hemostasis. Rossi's Principles of Transfusion Medicine is the most comprehensive and practical reference on transfusion science and medicine available. Led by a world class Editor team, including two past-presidents of AABB, a past-President of the American Board of Pathology and members of the FDA Blood Products Advisory Committee, and international contributor team. Comprehensive reference resource, considered the gold standard in transfusion. Covers current hot topics such as donor care – including the frequency of donation and management of iron deficiency/status), patient blood management, hemovigilance, stem cell therapies, and global aspects of the organization of transfusion and transplant services. New material on molecular immunohematology. Companion website includes figures, full text and references.
