Building a Better NASA Workforce Dec 19 2022 The Vision for Space Exploration (VSE) announced by President George W. Bush in 2004 sets NASA and the nation on a bold path to return to the Moon and one day put a human on Mars. The long-term endeavor represented by the VSE is, however, subject to the constraints imposed by annual funding. Given that the VSE may take tens of years to implement, a significant issue is whether NASA and the United States will have the workforce needed to achieve that vision. The issues range from short-term concerns about the current

workforce's skills for overseeing the development of new spacecraft and launch vehicles for the VSE to long-term issues regarding the training, recruiting, and retaining of scientists and engineers in-house as well as in industry and academia. Asked to explore science and technology (S&T) workforce needs to achieve the nation's long-term space exploration, the Committee on Meeting the Workforce Needs for the National Vision for Space Exploration concluded that in the short term, NASA does not possess the requisite in-house personnel with the experience in human spaceflight systems development needed to implement the VSE. But the committee acknowledges that NASA is cognizant of this fact and has taken steps to correct it, primarily by seeking to recruit highly skilled personnel from outside NASA, including persons from industry and retirees. For the long term, NASA has to ask if it is attracting and developing the talent it will need to execute a mission to return to the Moon, and the agency must identify what it needs to do to attract and develop a world-class workforce to explore other worlds. A major challenge for NASA is reorienting its human spaceflight workforce from the operation of current vehicles to the development of new vehicles at least throughout the next decade, as well as starting operations with new rockets and new spacecraft. The committee emphasizes further that when evaluating its future workforce requirements, NASA has to consider not only programs for students, but also training opportunities for its current employees. NASA's training programs at the agency's various field centers, which are focused on NASA's civil service talent, require support to prevent the agency's internal skill base from withering. Furthermore, NASA faces the risk that, if it fails to nurture its own internal workforce, skilled personnel will be attracted to other government agencies and industry. Building a Better NASA Workforce: Meeting the Workforce Needs for the National Vision for Space Exploration explains the findings and recommendations of the committee.

Social Housing, Disadvantage, and Neighbourhood Liveability Feb 21 2023 In a groundbreaking longitudinal study, researchers studied seven similar social housing neighbourhoods in Ireland to determine what factors affected their liveability. In this collection of essays, the same researchers return to these neighbourhoods ten years later to see what's changed. Are these neighbourhoods now more liveable or leaveable? *Social Housing, Disadvantage and Neighbourhood Liveability* examines the major national and local developments that externally affected these neighbourhoods: the

Celtic tiger boom, area-based interventions, and reforms in social housing management. Additionally, the book examines changes in the culture of social housing through studies of crime within social housing, changes in public service delivery, and media reporting on social housing. Social Housing, Disadvantage and Neighbourhood Liveability offers a new body of data valuable to researchers in Ireland and abroad on how to create more equitable and liveable social housing.

Uncovering the Logic of English: A Common-Sense Solution to

America's Literacy Crisis Dec 07 2021 "English is so illogical!" It is

generally believed that English is a language of exceptions. For many, learning to spell and read is frustrating. For some, it is impossible...

especially for the 29% of Americans who are functionally illiterate. But what if the problem is not the language itself, but the rules we were taught? What if

we could see the complexity of English as a powerful tool rather than a

hindrance? --Denise Eide Uncovering the Logic of English challenges the

notion that English is illogical by systematically explaining English spelling

and answering questions like "Why is there a silent final E in have, large, and

house?" and "Why is discussion spelled with -sion rather than -tion?" With

easy-to-read examples and anecdotes, this book describes: - the phonograms

and spelling rules which explain 98% of English words - how English words

are formed and how this knowledge can revolutionize vocabulary

development - how understanding the reasons behind English spelling

prevents students from needing to guess The author's inspiring commentary

makes a compelling case that understanding the logic of English could

transform literacy education and help solve America's literacy crisis.

Thorough and filled with the latest linguistic and reading research,

Uncovering the Logic of English demonstrates why this systematic approach

should be as foundational to our education as $1+1=2$.
